Audentra Product DSM - Transcript

00:00:01

Ajlan Okman: All is now being satisfied. It's coming. Sorry. Imagine extra on the Excellent. for today is bring your mom work day number two but I'm working from home Cuz

Laura Barcellos: download guys.

Ajlan Okman: if you don't escape, there is no ending for those questions. There will be always more questions.

Laura Barcellos: I guess that's something about moms,

Sait Yucekaya: See

Laura Barcellos: isn't it?

Ajlan Okman: Yes, I think they all come with the same flavor of a lot of questions and when they get older they get funnier.

Laura Barcellos: Yeah. Okay then.

Ajlan Okman: They lead with questions.

Laura Barcellos: Same. Go ahead.

Ajlan Okman: So yesterday, yesterday she asked me, "Is everything still in the same place as I came last time?" I'm like, "Yes." So what does this mean? Like you know she's going to make tea. She's asking right. So she gets into the kitchen. She's like where's the I'm like mom like you just ask me if everything is in the same place.

00:04:41

Ajlan Okman: So if you don't remember why you question. So they try to lead with the indirect question.

Laura Barcellos: Oh yeah.

Ajlan Okman: Yeah. Where are where are my flipflops? Mom, there is no flip flops over here in like the last time you brought one, you took them back. Oh, I don't remember. Okay, so now I have to figure out the flipflop situation. Sleepers. So funny.

Sait Yucekaya: That's

Ajlan Okman: All right.

Laura Barcellos: Hold on, guys. I'm I'm having a bargaining situation here.

Sait Yucekaya: I Beat.

Laura Barcellos: Okay, now it's solved. Well, good morning then. Um SaitI will kindly ask you uh so we can follow uh through the my enrollment so we can have

Sait Yucekaya: Mhm.

Laura Barcellos: a approval and then we did a bit of my financials yesterday but all the rest we still need to present and approve. Folks,

Sait Yucekaya: Yes, yes, yes. I will check what what have been like changes there. Uh, by the way, for my enrollment, the bug fixes are there, but I was going to like check with Dhairyaf she pushed it or not because uh is Dr. Zaibisgoing to show anything today?

00:06:26

Sait Yucekaya: Probably.

Ajlan Okman: Uh, let me check your calendar. I'm

Sait Yucekaya: Yeah, if if that calendar is also like available, it will be good because like we is

Ajlan Okman: Everybody can see each other's calendars, right? Do you guys can see my calendar? Yeah. Yeah.

Sait Yucekaya: that okay.

Ajlan Okman: Yeah. Just search our names in the calendar.

Sait Yucekaya: Oh,

Ajlan Okman: You also

Sait Yucekaya: I see. Nice, nice, nice. so I can actually show quickly the student 360 that the codex coded. But there's one thing that I'm not able to figure out yet. So let me open a Figma as well because I will need it. Um,

Laura Barcellos: Next item, guys.

Sait Yucekaya: I don't know.

Ajlan Okman: He was working real late at night in the office. He might just falling asleep.

Laura Barcellos: Oh, yeah.

Sait Yucekaya: I see.

Laura Barcellos: probably.

Ajlan Okman: Take him.

Sait Yucekaya: Yeah.

Ajlan Okman: Does he look competitive?

Laura Barcellos: No. No.

Sait Yucekaya: No, no.

Laura Barcellos: If he was working late, let him sleep.

00:08:17

Ajlan Okman: Yeah. Yeah. Don't touch the guy.

Laura Barcellos: Yeah. That's it. I'm all for it.

Ajlan Okman: Other thing is like he works late and he works me late too, you know. So when he works, I get motivated to work more. The only problem in this equation, my mom is in the resting room. We have we did like a really

Laura Barcellos: Yeah.

Ajlan Okman: good session last night. I left around 8. He was still going on. So, let him sleep. Well deserved.

Laura Barcellos: Okay. So, let me share this Let's look to my appointments then and let's figure it out what we still need to uh make better. Can you see me guys?

Ajlan Okman: and miss.

Laura Barcellos: My screen.

Ajlan Okman: Yes.

Laura Barcellos: Okay then. Uh so this feature is the one that we can you guys are on my right that's why I'm looking here. Uh this feature is the one where the student can uh ask for a call or a contact with our advisor.

00:09:37

Laura Barcellos: So the whole idea here is uh to make it available so the advisor can provide their calendars. We put it here and you can book a time when we have available. Or uh when we don't, it's not here. Great. Oh yeah, we can ask to book a time. So this actually blocks in person and this Okay,

Ajlan Okman: Can we go a little bit slow? Let's go back. Let's go all the way up. Up.

Laura Barcellos: sure.

Ajlan Okman: You have met. So we Okay. So apartments

Laura Barcellos: I'm still figuring it out the the pictures. So, number

Ajlan Okman: let's go down. Yeah. So there is over here. So let's focus on like story by story. We will go up in the hero later on. Let's focus on the first story. Book a conversation. So this is so spaced out again like it says academic advising your advisor and then academic advising. So basically you have the same thing three times.

00:11:06

Laura Barcellos: Yeah, we didn't we didn't check this specifically from EOD for today. This is something that I know it's probably messed up.

Ajlan Okman: Okay. So do you want me to review or do you want not me to

Laura Barcellos: I want to know if this makes sense to you. That's the I guess the

Ajlan Okman: All right. So the goal is first before you do this right because we can say like improve this portal to chat GPP and burn tokens. This is how I would approach. I will first talk to Zaibisright we are at a startup so lucky to have a co-founder that is coming from higher education right so we are in the kitchen so people don't have access I think we are not leveraging it enough so first if I was in your shoes this is what I would do what are there any possible meetings that any student can have under the sun in any institution right so your spot Hold on. You have like academic advising meeting. So me maybe there's like there needs to be like a counseling there's like a counseling and wellness department.

00:12:13

Ajlan Okman: Let's scroll down. I'm not sure if admissions counseling applies.

Laura Barcellos: Stop.

Ajlan Okman: Uh so maybe like enrollment support can be one, financial aid can be one but I think enrollment support name is different. Again I don't know about this. I'm just breaking the news to you. It can be called like student support services or like every college needs to be different maybe. I have no clue. Let's scroll down. Financial aid and yeah international. So international students have international student department right that can also pop up

Laura Barcellos: No.

Ajlan Okman: extra. If I'm domestic I may not need Yeah. testing center.

Laura Barcellos: Student health counseling, career, financial aid, academic advising.

Ajlan Okman: Yeah. So talk to Zaibis. Uh but like even though she can just give you a full list, I want you to understand what these meetings can be about. So like where you have in black, right? It says like international checkin. I'm just uh making it up like office of international education or international services counseling, whatever that meeting is called.

00:13:24

Laura Barcellos: Mhm.

Ajlan Okman: That's your like header two or header three whatever that like international checking header

Laura Barcellos: Mhm.

Ajlan Okman: type then that subtext is too far apart so the spacing needs to be fixed I want that subtext to be about

Laura Barcellos: Oh, this this

Ajlan Okman: what this meeting can help them with right and

Laura Barcellos: Mhm.

Ajlan Okman: then after that uh where you have like the two two people standing right next to each that I call that should be instead of that uh like whoever is there assigned advisor for that to meet right like for example mine

Laura Barcellos: Okay.

Ajlan Okman: was uh Barbara Mulari when I was an international student right it

Laura Barcellos: So it should be like like car.

Ajlan Okman: yeah so it should be a card either have one person or the teammate, right?

Laura Barcellos: Yeah, maybe both.

Ajlan Okman: So I don't know.

Laura Barcellos: Why not? Like Barbara is international student service.

Ajlan Okman: So it's it's going to be so like it's going to be tough for asyling. So we want people we will say probably like either barber services person or we don't want a service advisor one person or team of people services everybody and then you assign their team so I think this will help us with the power

00:14:50

Laura Barcellos: Okay. Mhm.

Ajlan Okman: back as well. So we will just map the same access rules over here. So let's say if I'm assigned to just the office, I will have the initials of the office OI, office of international, right? And then it will say office of international education and then it will be that right. So it will still look like a person but it will be the name of the group. So Jira has something called teams.

Laura Barcellos: Oh yeah. Okay.

Ajlan Okman: Instead of assigning a users, we can also assign teams. So we can basically get influence from there. So pick a open time it's going to be always pick a open time. So you know that doesn't make sense.

Laura Barcellos: It doesn't make sense. Yeah.

Ajlan Okman: And then when you say book at Yeah.

Laura Barcellos: You can't you can't book a close time, right?

Ajlan Okman: Exactly. Cannot book at close. So then over here like this is not a bad idea but uh I just don't like the UX feel like it.

00:15:55

Ajlan Okman: It looks good but there is again too much scrolling. The uh UI components are too spaced out

Laura Barcellos: Mhm. Too much spacing. Yeah. Yeah. this. I will figure this out

Ajlan Okman: and then when you click on the date picker I don't like how your date picker looks.

Laura Barcellos: like this.

Ajlan Okman: Yeah. So see like if you can mimic instead of doing it like this Google bookings is great. I don't know. Uh I will defer to Z. She uses this more than I do. But this looks Yeah,

Laura Barcellos: I like either I like and I rather and I to be honest I rather like

Ajlan Okman: let me share my like if you're going to do not

Laura Barcellos: this.

Ajlan Okman: Are you guys able to see my screen?

Laura Barcellos: Yeah. Um, this is beautiful.

Ajlan Okman: So compare calendarly,

Laura Barcellos: Yeah.

Ajlan Okman: compare Google booking and compare whatever else is over there. Take one more of this. See how people are doing.

00:16:46

Laura Barcellos: Mhm.

Ajlan Okman: But I generally see bookings like this nowadays.

Laura Barcellos: Mhm.

Ajlan Okman: So this way like you know you get to see what are the days available that you can book on the left and then what are the times that you can book with me.

Laura Barcellos: Where is it?

Ajlan Okman: So if I were you I will just say get influenced by Google calendar and I will limit my UX research time. Of course you can't meet with Sunday and Mon uh Sunday Saturday.

Laura Barcellos: Okay.

Ajlan Okman: So probably five day a week type of view will be just enough.

Laura Barcellos: I guess I guess maybe I guess maybe like it's about what the the person let free to be booked.

Ajlan Okman: Yeah. So that coming from the edit page.

Laura Barcellos: So if this person can be

Ajlan Okman: So take a look at the edit page of that booking. So this is how I set my AO meeting request.

Laura Barcellos: Exactly.

Ajlan Okman: Right. So I'm taking avoiding calendars. I'm adding co-hosts. This is really useful for interviews.

00:17:59

Ajlan Okman: Booked the appointment settings. Just take this in. You know why we are re-engineering the wheel. All right. Let's go back to your design.

Laura Barcellos: Okay. I'm just sharing something here. Okay.

Ajlan Okman: Okay. So over here like I will suggest altering that book a time instead. I love drawers but I think this won't fit in a drawer.

Laura Barcellos: You will do it like this.

Ajlan Okman: So no probably do a popup in a

Laura Barcellos: like open on the bottom.

Ajlan Okman: second.

Laura Barcellos: Okay.

Ajlan Okman: I uh put a booking I will probably put a popup.

Laura Barcellos: Mhm.

Ajlan Okman: So then on the right side there is a lot of blurb that probably I don't need

Laura Barcellos: Mhm.

Ajlan Okman: life how this works blah blah blah if you really want that you should put that to the hero there is a lot of unnecessary text in the field I think on the right side it should be about their next appointments so whatever I book like how you have the right panel

00:18:59

Laura Barcellos: Mhm. On the morning brew, we have like you have eight emails to import and that that that. Yeah.

Ajlan Okman: No, no,

Laura Barcellos: I I I made Yeah.

Ajlan Okman: just agenda view. Forget about that.

Laura Barcellos: Oh, a calendar.

Ajlan Okman: No, no. Agenda. Agenda. So, difference between agenda and calendar. Agenda means what are my upcoming meetings?

Laura Barcellos: Yep.

Ajlan Okman: I see as a list.

Laura Barcellos: Yep.

Ajlan Okman: So,

Laura Barcellos: I got you.

Ajlan Okman: I have like the link and all of that.

Laura Barcellos: Okay. I got you.

Ajlan Okman: And then the calendar is what you said, you know.

Laura Barcellos: Okay.

Ajlan Okman: So,

Laura Barcellos: A calendar is a calendar.

Ajlan Okman: Yeah. Then after that maybe figure out a way in that view that they can see upcoming meetings versus past meetings.

Laura Barcellos: So we have down here like past and cancelled.

Ajlan Okman: Okay. Yeah. But over here you just made this.

Laura Barcellos: We think it's too much space just to see the past,

00:19:46

Ajlan Okman: Huh?

Laura Barcellos: you know. Why why would I do it?

Ajlan Okman: Yeah.

Laura Barcellos: and the mic.

Ajlan Okman: Play around like I'm not really sold on any. So this is fine.

Laura Barcellos: Yeah.

Ajlan Okman: If you want to put it as part of so you see over here it says like your conversation is nothing booked yet but above you are saying the same thing again scroll up a little bit so what it says like nothing booked this one I should go to the

Laura Barcellos: Yeah.

Ajlan Okman: right

Laura Barcellos: Oh, here like uh an agenda and when you have you have

Ajlan Okman: yeah agenda agenda conversations are the same thing

Laura Barcellos: like yeah got

Ajlan Okman: Yeah. Yeah.

Laura Barcellos: you got you okay this was on me on my side that's this was something that I would to I would like to deep dive so yeah

Ajlan Okman: Well, yeah, sure.

Laura Barcellos: say I think has something to show also

Ajlan Okman: Work on it. But before we start doing like wasting tokens, I want everybody to confirm the scope, right?

00:20:46

Ajlan Okman: Do a deep deep dive with Zy. Inhale all that information including the UX. You can ask her about the UX too, right? And then you met next open time. I don't know what does that mean. Why we are saying Camela is your advisor? Because we are just giving them list of their advisors from all different departments.

Laura Barcellos: Yeah, I upgrade.

Ajlan Okman: Yeah.

Laura Barcellos: It's

Ajlan Okman: Like do a big UX uh and editorial editorial scrum everything with Z learn everything get everything like you know confirmed. Then after that come to me let's figure out the logic of it you know

Laura Barcellos: okay. What I would do right now, I have like four or five things to figure it out with Dr. Z is I will have a meeting. I will actually that part for it today probably.

Ajlan Okman: and yeah and this is like a simple workflow so that's why like you know you can probably figure this out but if I ask something really complex like how we did the financial aid you can come to me first I will give you the wireframe I will say like hey like we should probably have a sunburst chart over here.

00:21:53

Ajlan Okman: Should look like this. Look like that. I can like give you the wireframe. Then you can go to Z again lo industry get all that wording

Laura Barcellos: Mhm.

Ajlan Okman: straight and then come to me. We test the functionality and make sure everything is working.

Laura Barcellos: Okay.

Ajlan Okman: Okay.

Laura Barcellos: But this is something that it's in design. Yeah.

Ajlan Okman: Yeah. Yeah.

Laura Barcellos: So that's Mhm.

Ajlan Okman: And like imagine this workflow like a zya and then developer test acceptance. So this is the full workflow. If something is net new we follow this. When the team matures up and you have more understand you can start skipping me. You can start skipping zy next. If you know like that domain then you get the functionality you can start to skip me. I can just kicking at the acceptance with zy. Okay. So we will more the team matures this life cycle is going to trust me get like a little bit further but now like it looks like you know we are still learning that's why I want to add more people to the team this way when we train we train two at the same time or four at the same time for topics and we have like a core Audentra80 guys by the way I love that our startup starts at a zyus did you send that product or did you send it

00:23:09

Laura Barcellos: Yeah.

Ajlan Okman: to a CIO. Uh,

Dr. Zaibis Muñoz-Isme: I send it to the AACRO.

Ajlan Okman: so they put our logo

Laura Barcellos: Yeah.

Dr. Zaibis Muñoz-Isme: Oh.

Laura Barcellos: like uh Zabis was talking about that like we are going to be one everybody who reads the list and the the the conference we'll see our name because this starts with

Ajlan Okman: Yeah.

Laura Barcellos: a

Ajlan Okman: Yeah. Yeah. Yeah. Yeah. Take a look at this.

Dr. Zaibis Muñoz-Isme: Oh, I put it in the chat, too.

Ajlan Okman: Yeah. Yeah. I'm so glad that like we did not call Audentra

Laura Barcellos: wonderful it's because of your accent it's not like all Mine mine mine mine other sand

Ajlan Okman: later in my corporate life.

Laura Barcellos: Audentraand L instead of you. When I say

Ajlan Okman: Oh, I was uh kidding with Z and say like hey like should have you called like oh like you know double A so we are the first but I think being right in the middle it's perfect like when I look at it I see us first look at that

00:24:22

Laura Barcellos: Yeah, this is great. It looks really beautiful.

Ajlan Okman: work they look So sad over there. Never started a started W. Where is Melt Force? Yeah, Melt Force over there. Can't even read them. I just see the cloud.

Laura Barcellos: Yeah, they kind of look. Yeah, but this is something, you know, like work day. Yeah.

Ajlan Okman: Yeah. All right. What else do you guys want to review?

Laura Barcellos: um say to share with Yeah.

Sait Yucekaya: Yeah, quickly. So, the student 360 that Yalas designed was implemented overnight. I was checking the differences because they're like much difference than expected. But I believe like as far as I checked for the font types for the color and the front brand stuff, they are aligned. But things like Codex made some decisions for us. I don't know. I was just checking one by one. So, uh, do you guys know the original design or it's it's like this?

Ajlan Okman: You just Yeah,

00:25:31

Sait Yucekaya: So, a little bit whitish. So,

Ajlan Okman: that's that just take me to like your design. Let's walk through. Uh can you show me the list first student 360?

Sait Yucekaya: this one student choice.

Ajlan Okman: No, no,

Laura Barcellos: No, no,

Ajlan Okman: the Yeah.

Sait Yucekaya: Yeah.

Laura Barcellos: that is

Sait Yucekaya: The Yeah. Yeah. The list didn't change,

Ajlan Okman: Okay. So,

Sait Yucekaya: so it's it's not coded.

Ajlan Okman: let me just be specific over here. Are we on record?

Sait Yucekaya: Yeah. We must be Yeah.

Ajlan Okman: Okay.

Sait Yucekaya: transcript.

Ajlan Okman: So, this is what I think it should be. Uh, can you click on the action center? Yeah. Can you click on a test port? I don't know why they're still there.

Sait Yucekaya: Yeah. Yeah. No task for this like what?

Ajlan Okman: Okay. So, this is the old design. This is only your local. So,

Sait Yucekaya: Yeah.

Ajlan Okman: in the new that Dhairyamade,

00:26:09

Sait Yucekaya: Yeah.

Ajlan Okman: when you click on action center, it opens up. It says like enrollment, financial aid, such and such, right? All those projects you get to see.

Sait Yucekaya: Yeah. Yes sir.

Ajlan Okman: We got to rename this. Exactly.

Sait Yucekaya: This one is

Ajlan Okman: You see on the left it says financial aid enrollment like it falls down. So this is going to also meet with our our arc. That's why it's really important. If if the institution says guys financial aid

data is classified, student life can't see it. You know, then they won't see all of that project gone. Does it make sense?

Sait Yucekaya: Yeah. Yeah.

Laura Barcellos: Mhm.

Ajlan Okman: So how do we take this learning to student 360? So, student 360 has admissions applications. Student 360 has uh student applications, right? Student 360 may have graduate records. I'm just making it up. But definitely so far we will see admission applications and then the actual students or the enrollment, right?

00:27:24

Ajlan Okman: students pending enrollment like those first tier folks that hasn't been fully matriculated whatever that needs to be called and then the last one is like the students enrolled students and then the fourth one can be graduated students right whatever that database is called that

Sait Yucekaya: Yeah. Listen.

Ajlan Okman: note what we need to do is if somebody submits the application Right? They go as application. They have application ID such and such and then they accept the offer. Right? Or we send them the offer. And then uh as soon as we send them the offer, they are still over there right in the admission suite. But if they accept offer, they also populate in the enrollment list. Right.

Sait Yucekaya: So we duplicated.

Ajlan Okman: If they

Sait Yucekaya: Did I get it correctly? So both admitted plus like it's like a funnel. So as far as I see. So you can like get the bigger. Okay.

Ajlan Okman: Yeah.

Sait Yucekaya: I got it.

Ajlan Okman: So then after that if they enroll but they actually matriculate and start the classes like you know pay their uh like pick their classes and all of that you know whatever that is called that stage.

00:28:48

Ajlan Okman: Right now I'm not in my higher education mode. Still haven't finished my coffee. Then they come to the other side.

Sait Yucekaya: Just

Ajlan Okman: But when we duplicate the records, we don't create like directly create another site as a student.

Sait Yucekaya: Yeah.

Ajlan Okman: So there is still one site with one unique ID that we can link site.

Sait Yucekaya: Yeah, just filtering.

Ajlan Okman: So if I 360 as admissions professional I have access to student right. If I go to student 360 that student list or maybe as a enrollment specialist if institution allows me to see it I should not go back to applications.

Sait Yucekaya: Here

Ajlan Okman: I will also have a tab under that student's record in enrollment that says application and then I will be able to see their application from enrollment to depending on

Sait Yucekaya: we go.

Ajlan Okman: what I have access I I will not need to travel between those categories because it's the still same student let's say I'm the super admin and I look for our current student enrolled class of 2026 who is about to graduate say if I'm the super admin from that I can just go see your application your records that's why it's called student tree system but if I don't have access to that let's say I'm not allowed to see application

00:30:13

Sait Yucekaya: Okay.

Ajlan Okman: data I will not see the application and I won't have that whole admission suite over there does it make sense so if I

Sait Yucekaya: Yeah, I see.

Ajlan Okman: I don't see that folder of applications plus I will not see the tab of application in the student profile.

Sait Yucekaya: Mhm.

Ajlan Okman: So that should architecture.

Sait Yucekaya: Okay.

Laura Barcellos: what's safely showing right now in the student 360 is something that Yala designed for us some time ago. Uh,

Ajlan Okman: Yes. So this is good.

Laura Barcellos: this I thought

Ajlan Okman: I like this. But uh this is a good starting point. First, if you are in the ad admissions tab, we should have something like this like a list.

Sait Yucekaya: Mhm.

Ajlan Okman: But it will not show us metrics in the applications. It should show us student fit score, ryer score, whatever you want to call it. And then it should show us as so for example like that pipeline you have that is the progress bar for involvement that should be the application right so let's say they complete 50% 60%.

00:31:35

Ajlan Okman: we get to see their application that becomes 100% when it's submitted and then

Sait Yucekaya: Mhm.

Ajlan Okman: the next score is their academic like fit score or like whatever fit scores we have you can like rer score which can say like 60

Sait Yucekaya: Yeah.

Ajlan Okman: 80 it can be we can come up with this later right it can be academic personal social fit right something like that that's still TBD we don't know how Does that will look? Then after that another score for them to choose us, right? How likely this person will be choosing us? Does it make sense?

Sait Yucekaya: It's

Ajlan Okman: So then current blockers is good idea but may not apply at the admission stage. So ne maybe we will combine those with like next best action or something like that. Uh may maybe we may call it like a status or next best back action. We will like take a look at that and come up with the taxonomy. And maybe you can put like over here on the left hand side when it says, "Oh yeah, you already have data science school. Yeah.

00:33:02

Ajlan Okman: Okay, that's good. And then the financial mark instead of putting it, let's see like you know what's the information worth showing over here. So maybe this much aid proposed this much

aid awarded something like that you know and there is nothing that I see this student if it's in state outstate or international uh in that financial Maybe we can also estimate something about their FAFSA. I'm not sure. We may need to talk to Rosemary Z or we have new financial aid contact to understand. Uh when do we have FAFSA totally in? Because I was I was always filling it out like after semester starts, you know. Uh then can we guesstimate the fa you know based on their background and such probably that's going to be tough and it's going to be too much information. Exactly. No. So then leave FS off just put like the financial aid what we awarding as part of the package. Last activity normally is a good idea. I'm not sure. So what will bring it over here?

00:34:41

Ajlan Okman: I challenge you guys to see like what will the activity look like? What? This is not bad. It's pretty good. And then you have high risk, high risk over here, something like that, which is good. But what if I want to see like let's say past semester applications? Can I divide this by semester?

Sait Yucekaya: Uh for the same person press applications.

Ajlan Okman: So no like uh all the students maybe this may have uh fall such and such start.

Sait Yucekaya: Oh, I see.

Ajlan Okman: So maybe I want to see like only people who are going to start next fall or spring you know but this is yeah I'm talking

Sait Yucekaya: Oh, I see. I see. Yeah, that's not here.

Ajlan Okman: currently about the admissions portal right the applications and I know the scope is not admissions so I don't need to see the rer score migr is accurate just show me like a wheel or something you know

Sait Yucekaya: Yeah, just for future reference.

Ajlan Okman: uh exactly for future reference.

00:35:45

Ajlan Okman: But we have to show something like that as part of enrollment because that's a test step. You know, it doesn't have to work, but we will demo and say. So then Let's figure out the admissions first because all the students we have in the enrollment panel they will also have to have a complete admissions record and they will

Sait Yucekaya: Listen.

Ajlan Okman: be all in the all in the offered stage. Right? So that's perfect and then come up with some scores. Let's scroll up. So over here put like applications receipt you know since this is admissions page we are talking about applications applications 360 maybe we change the module name to Audentra360 I'm just making it up or uh whatever 360 so then applications 360 can be all about applications which is this page that we talking about how many applications you received, how many you accepted so far,

Laura Barcellos: But

Ajlan Okman: how many accepted, how many of them declined such and such. So I need to see like that type of metric over here.

00:37:03

Ajlan Okman: How much aid you uh we propose, how much aid you plan to give like you know come up with some KPIs that will be good for admissions and financial people to packages.

Laura Barcellos: Then we are out of the enrollment suite and we start to talk about admission.

Ajlan Okman: Yeah, unfortunately. So, but don't think about the functionality just give me a work. So, like looks like dashboard.

Laura Barcellos: Yeah, this this is not on like it's not our main priority. We are looking this as a design phase. So we can do it later.

Ajlan Okman: Yeah. Yeah. But I think we should just do it now. So, we mark up because this is the simplest workflow,

Laura Barcellos: Oh. Oh no. Yeah.

Ajlan Okman: right?

Laura Barcellos: No, the mockups. Yeah,

Ajlan Okman: Yeah.

Laura Barcellos: I mean like the the whole stuff like make it work.

Ajlan Okman: like how we did it with the uh how we did it with the financial aid. We had something that like looked wor like rosemary was like oh what is this

00:37:57

Laura Barcellos: It will be beautiful. We can demo but it's not.

Ajlan Okman: amazing you know so we want the same thing over here because this is the simplest now

Laura Barcellos: Yeah, that's it.

Ajlan Okman: so then we figure this out the KPIs the look all admissions data fits over here don't even give me the click click down right if you want to give give me that's fine whatever but what's important for me is this like list page that you have so then We get this. I give you guys thumbs up. Zaibisgive you guys thumbs up. Oh yeah, like this is the correct KPIs. It looks like that. Good, good, good. Now we have the UI taxonomy for where things need to look, how each card needs to be positioned, what how the KPIs look, are we on target, off target, whatever that is we see over here. Now, guess what? We're going to just copy and paste the same thing for enrollment. So, whatever you want to call it like enrollment 360 or just call it plain old enroll.

00:38:59

Ajlan Okman: form. We will do the marketing of it later.

Laura Barcellos: We can do it like the the drop down like we did on the test board like enrollment

Ajlan Okman: Yeah.

Laura Barcellos: me.

Ajlan Okman: Yeah. So then now you have the same thing for enrollment but now you see the students in this list again that I can like filter only whatever semester I want but the students who accepted me right who accepted me then after I start tracking from the day that they click I accept to whatever until the first day of classes over here. So then you're going to have the same information that we spoke there like class of blah blah starting semester blah blah blah and then now melt right and enrollment completion percentage maybe current blocker and uh like I always like current blocker and next next best best actions together and then instead of calling it financial mark you know again follow up with Zaibisif we know during the enrollment stage like around May 1st about their pops situation so then show us the gap if we know if you don't then figure out like you know uh some other metrics about financial during the enrollment phase so then we did this correctly the top level Great.

00:40:46

Ajlan Okman: Now, student 360, student success 360, success 360, student success. Another one. Now, we're going to do the same thing for the enrolled students how it looks. But this one, just put the item on the menu, nonclickable. Don't do it yet because it's more confusing. Does it make sense? So, when I click on student 360, I need to see at least three things. or call it four things. Put another unclickable for the graduated student. Okay, gray them out that they're not part of the school.

Laura Barcellos: Okay. But when we click on student 360, we want to see a landing.

Ajlan Okman: Well, it should open and then you go to each one. Yeah.

Laura Barcellos: Like it like this.

Sait Yucekaya: So, but this like Yeah.

Laura Barcellos: Like this.

Sait Yucekaya: And the default one is going to be whatever you last opened or the top one.

Ajlan Okman: the no the default one over here you're missing for you page

Laura Barcellos: Oh yeah, that's that's my my question.

00:41:47

Ajlan Okman: right yeah so you need a for you right between passport and

Laura Barcellos: Like

Sait Yucekaya: Oh, yeah.

Ajlan Okman: financial so that for you is aggregate of all these folders like in learn

Laura Barcellos: that That's that is on my

Ajlan Okman: something like that too. Look it up. Yeah, like put it right now. Don't work on the UX of it yet because I really need like those workflows done first for you guys to aggregate things

Sait Yucekaya: Okay.

Ajlan Okman: correctly. You know there is nothing no

Laura Barcellos: so what is the for you in the student 360 that's the question

Ajlan Okman: for no

Laura Barcellos: so it will open whatever last I opened

Ajlan Okman: just populate the menu and then let them take over.

Laura Barcellos: Mhm.

Ajlan Okman: Yeah.

Laura Barcellos: But it

Ajlan Okman: Just pop like that without opening anything on the right side.

Sait Yucekaya: I see. Yeah. until selection nothing is going to be hidden.

Ajlan Okman: Yeah. Yeah.

Sait Yucekaya: on.

Laura Barcellos: will be blank.

Ajlan Okman: No black like you know.

00:42:40

Ajlan Okman: So what you show is what's selected over there until selection you see the old stuff.

Laura Barcellos: Okay. Okay.

Ajlan Okman: If you click on that it will just populate extended.

Laura Barcellos: Gotcha. Understood. Understood. Understood. Got it.

Ajlan Okman: All right. So I got to jump on the other meeting but I think this is enough information to dig.

Sait Yucekaya: Yeah.

Ajlan Okman: Feel free to take rest time to clarify the work is

Laura Barcellos: We have a lot if you say I would like

Ajlan Okman: available.

Laura Barcellos: to walk through a few things. Uh Dr. Z is by Okay.

Dr. Zaibis Muñoz-Isme: Yeah, I'm here.

Laura Barcellos: I know say may have a daily right now or pretty soon.

Sait Yucekaya: No, no, not now. Uh, we have like one hour race.

Laura Barcellos: Hey, hi Dia. I heard you work late last night. Welcome.

Dhairya Shah: Yeah. I don't know. It's I'm good.

Laura Barcellos: Are you okay? I'm good.

Dhairya Shah: Yeah.

00:43:35

Dhairya Shah: Just couldn't wake up today.

Laura Barcellos: That's fine. I didn't even ping you. Like, let him sleep. Okay. Hi, Sam. I didn't have the chance to say hi also to you. How are you?

Samarth Babbar: Hey, good morning. How's everyone?

Laura Barcellos: Great.

Sait Yucekaya: Thanks, man. They're good.

Laura Barcellos: Okay. One of the things that we need uh to talk to Dr. Zaibisis regarding uh morning brew right we have a few wording and stuff to figure it out. So I will defer uh to you guys to stay or not. I will share my screen. I just want to make sure like that we cover everything so I

Samarth Babbar: I have my instructions clear from yesterday.

Laura Barcellos: can Yeah.

Samarth Babbar: So, I'm going to work on that.

Laura Barcellos: Go ahead. It's it's on you.

Sait Yucekaya: Okay, that's it.

Laura Barcellos: feel free.

Sait Yucekaya: That's great.

Samarth Babbar: Gotcha.

Laura Barcellos: Okay. So, let me share and let me open my spreadsheet.

00:44:33

Laura Barcellos: Now, I have a lot of spreadsheets. I need a better way to do this kind of stuff. So, so uh the first thing I would like to understand is about the insights on the institution of intelligence. Dr. cuz I What do you think? about those. Would we do it different? Like as if if if imagine that we create this for you and you are looking uh does it make sense like what will just change you were looking to your university you know to your off.

Dr. Zaibis Muñoz-Isme: Yeah. Yeah. No, I do like it. I think um to be honest, I probably put the institutional pulse above the institutional intelligence like

Laura Barcellos: Yeah.

Dr. Zaibis Muñoz-Isme: cuz I feel like that's like the money shot. Like when I open it in the morning, I want to that the institutional pulse is probably what's most important. If I have five more minutes, then I'll read the institutional intelligence.

Laura Barcellos: So would you rather look to that and

00:45:51

Dr. Zaibis Muñoz-Isme: I would just flip flip them like

Laura Barcellos: like like say okay I need to do something or I don't

Dr. Zaibis Muñoz-Isme: positioning.

Laura Barcellos: this is my you would guide

Dr. Zaibis Muñoz-Isme: Yeah. I because Right. I'm going to a meeting with the president or the CFO. So I want to know like my like when you check the stock market like my ticker I want to check the ticker.

Laura Barcellos: Okay. Okay. And regarding the insight structure, so we flip we put institutional uh post up, institutional intelligence down,

Dr. Zaibis Muñoz-Isme: Mhm.

Laura Barcellos: and then you are looking to your insights.

Dr. Zaibis Muñoz-Isme: Mhm.

Laura Barcellos: So what would you like to see here? So uh imagine that we have of course the header and then we have something and then we have the money shot and then we have recommended actions. Does it make sense or would you do something different?

Dr. Zaibis Muñoz-Isme: I think it does make sense and I think

Laura Barcellos: Right. The bad ones first.

00:46:51

Dr. Zaibis Muñoz-Isme: this guided yeah I would say like most critical to less

Laura Barcellos: Of

Dr. Zaibis Muñoz-Isme: critical uh left to right. Um but I think also like as we start working with a school depending on their workflows is going to really inform what institutional intelligence we populate. No,

Laura Barcellos: course,

Dr. Zaibis Muñoz-Isme: I do like that the

Laura Barcellos: it's interesting from a lot of what Samarth is doing right now.

Dr. Zaibis Muñoz-Isme: Yeah,

Laura Barcellos: So,

Dr. Zaibis Muñoz-Isme: I do like theity to talk to Edward about. My question is like what is our our view going to be when you click on the view details? Is it going to open a report? Okay.

Laura Barcellos: Is this

Dr. Zaibis Muñoz-Isme: Okay. Because that would be what is important.

Laura Barcellos: so

Dr. Zaibis Muñoz-Isme: Like what does this look like? What is it telling me?

Laura Barcellos: I think this is too big being honest like talking about UI. I think this is too big and should be on the right side, but

00:47:52

Dr. Zaibis Muñoz-Isme: Scroll down. What does it say? photo. It'll show me all the students in the cohort.

Laura Barcellos: This is from the back end. No good.

Dr. Zaibis Muñoz-Isme: Let me think about it. Like I I don't I

Laura Barcellos: Well, uh let's see.

Dr. Zaibis Muñoz-Isme: um

Laura Barcellos: We are looking that we can loss 1.6 six million right

Dr. Zaibis Muñoz-Isme: Yeah.

Laura Barcellos: if I'm looking to it I would like to open and say okay why and how can I prevent it I guess that's will be my questions like why I'm

Dr. Zaibis Muñoz-Isme: Right. Exactly.

Laura Barcellos: losing

Dr. Zaibis Muñoz-Isme: Yeah. What can I do? I think also if it's the leader, they're going to want to figure out like who owns this? like who can I blame for this and who can

Laura Barcellos: Yeah.

Dr. Zaibis Muñoz-Isme: I follow send a message to to say like fix this you know.

Laura Barcellos: Mhm. Okay. Can be a person, can be a team.

00:49:06

Dr. Zaibis Muñoz-Isme: Yeah.

Laura Barcellos: Okay.

Dr. Zaibis Muñoz-Isme: Exact.

Laura Barcellos: Let me see the other Yeah, we covered this. Yeah. And then we have on the bottom here. Uh where is it? I don't know why my screen is so here is the insights right so let's think like if you're seeing this news and this news are news oh god I no we lost her hello you close the

Dr. Zaibis Muñoz-Isme: Sorry, lost my screen. Yeah.

Laura Barcellos: So yeah uh we need to have this in conversion to something right.

Dr. Zaibis Muñoz-Isme: Yeah.

Laura Barcellos: So uh

Dr. Zaibis Muñoz-Isme: If if that's what we're trying to do, I do think that like if we reflect whatever is in the institutional intelligence related to an article, I think that's really cool.

Laura Barcellos: yeah, but what if it's just something like

Dr. Zaibis Muñoz-Isme: It doesn't it doesn't have to be. Yeah.

Laura Barcellos: this?

Dr. Zaibis Muñoz-Isme: Because isn't there an option that they don't have to choose that?

Laura Barcellos: So when you choose like the longest version of morning brew an insight, you will have it here.

00:50:50

Laura Barcellos: So,

Dr. Zaibis Muñoz-Isme: Yeah.

Laura Barcellos: do we like the idea to have insights here in some and the others we don't? That's fine.

Dr. Zaibis Muñoz-Isme: Yeah.

Laura Barcellos: Are we going to put everything else?

Dr. Zaibis Muñoz-Isme: I like the insights. I think every time that I have mentioned it, they're like, "Oh, very cool."

Laura Barcellos: Okay. So we put the insights whatever the news has something to do what we are doing because like this is like let's look to this news like need more student and less drudgery is Al the answer which insight can I

Dr. Zaibis Muñoz-Isme: Are these uh p are these pulling updated articles?" Another old article,

Laura Barcellos: say like no those are old

Dr. Zaibis Muñoz-Isme: right?

Laura Barcellos: but imagine that we have one of those like just some opinion article that someone is saying something about

Dr. Zaibis Muñoz-Isme: Yeah.

Laura Barcellos: something we may not have insights to put here because

Dr. Zaibis Muñoz-Isme: Yes.

Laura Barcellos: it's not related like here more that melt strategies for the extended uh y season great amazing I may put like your y does that your melt is that other but it not necessarily inside it's just some uh like number dumping.

00:52:18

Laura Barcellos: Okay. So, what I will do and this is on me. I will look to some new news and create some insights out of my hat and let's see if this structure makes sense and then

Dr. Zaibis Muñoz-Isme: Okay.

Laura Barcellos: I can uh create like uh a scale that can always use the same framework. But I guess that was bad.

Dr. Zaibis Muñoz-Isme: Okay. Well, I have to jump on at 10:00 and I have to go potty. Uh, I can again 11 if you all need me.

Laura Barcellos: Okay, I will I will call you in the afternoon probably.

Dr. Zaibis Muñoz-Isme: Okay. All right.

Laura Barcellos: Okay,

Dr. Zaibis Muñoz-Isme: Thanks, Dean.

Laura Barcellos: thank you. Bye-bye.

Dr. Zaibis Muñoz-Isme: Happy Friday.

Laura Barcellos: Happy Friday. Hi guys.

Sait Yucekaya: Yes, man.

Laura Barcellos: We are far from the sprint goal.

Sait Yucekaya: Yeah, it was it was bumpy.

Laura Barcellos: So yeah. So what we are going to do right now is to use the newest version of the thing I did because Samarth used it to on board and then I f***** up his on boarding.

00:53:29

Laura Barcellos: I'm sorry. He used the V3 and then the spacing the spacing got filed and

Sait Yucekaya: How uh I see you.

Laura Barcellos: the headings and

Samarth Babbar: No, but I I I almost I almost got it and I think today we should be able to finalize it right based on

Laura Barcellos: Yeah.

Samarth Babbar: yesterday's feedback.

Laura Barcellos: And then and then he

Samarth Babbar: And when by the way save the video that you have that's on the better version that's not the not the messier version that's the better version. So feel free to give me any feedback you have.

Laura Barcellos: Yeah.

Sait Yucekaya: You see?

Laura Barcellos: The master version. It was on me.

Samarth Babbar: No, no, no. It's all good.

Sait Yucekaya: I see.

Laura Barcellos: Some just brought back like the live

Samarth Babbar: And yeah, in in 15 minutes, I literally told it to revert back right now. No more changes.

Sait Yucekaya: I see.

Laura Barcellos: we got some sort of approval on the on boarding. Uh, of course, Ajlanuh add a few stuff that we didn't like previously.

00:54:28

Laura Barcellos: But I guess this will be the final round and I really need uh the student portal like as much as complete as we can. Right.

Sait Yucekaya: May I show Yeah.

Laura Barcellos: So my go ahead just let me take coffee.

Sait Yucekaya: May I show one thing? So the thing is like of course of course of course it's not going to take

Laura Barcellos: Hold on. And I'm with a huge Yeah,

Sait Yucekaya: long. So you pick your cup of course.

Laura Barcellos: I'm just

Sait Yucekaya: just weird thing is like uh yeah like for example the design is like I think cleaner but uh hopefully it's gonna open so the layout is correct as far as I check the fonts are correct but the colors and like some things are not as in the like design and I was like interrogating codex about why it did something like this. So nobody yeah like probably yeah let me check couple things as well. So this is application application yeah like some some parts are like why it's like that you know it's like f***** things up.

00:55:43

Samarth Babbar: Um, wait. Sorry to interrupt you. Say, do you have any feed?

Sait Yucekaya: Yeah.

Samarth Babbar: Should I just go and continue working on it and see you guys in check in

Sait Yucekaya: Okay. So you continue because like this is okay like in my according my experiences these are like in UX terms getting like worse

Samarth Babbar: Right.

Sait Yucekaya: but Ajlanlikes it that way so I can't like discuss his um taste

Samarth Babbar: Drawbacks.

Sait Yucekaya: in UX part.

Samarth Babbar: Drawbacks.

Sait Yucekaya: Yeah. So, so like for this one I can't give any feedback to B if it is working that is okay for me from now on because it's like to be honest I I was like create I was going to create

Laura Barcellos: There we go.

Sait Yucekaya: something really really better and you were like on a really good trade but now if Ajlanwants it this way then it's going to he's going to like have this way so you know

Samarth Babbar: Okay.

Sait Yucekaya: as far as I checked it's like functionally working I believe like pretty pretty UX mannered Uh

00:56:41

Samarth Babbar: Mhm.

Sait Yucekaya: so you can start the back end thing today. So all good from my side. So you check it with Laura and Ajlan.But since it's like his feedbacks,

Samarth Babbar: All right.

Sait Yucekaya: I think it should be good.

Samarth Babbar: Okay.

Sait Yucekaya: Uh if you have anything like uh for the for example uh SMS sorry email and stuff.

Samarth Babbar: Mhm.

Sait Yucekaya: Uh you can like if you know what to do like go ahead if you need anything on the uh cloud side cloud side and like I don't know if you want to discuss how to to do things uh let me know

Samarth Babbar: Mhm.

Sait Yucekaya: but it's it seems easy like you know database writing uh so for the SMS sorry I'm keep talking about SMS for the email part uh you're good to go you don't need any dependencies so SMTP works like charm only for sending so it should be fine and You can use your own email if you want like smart.com I don't know whatever you have use it for email sender after testing we will have it to you know

00:57:34

Samarth Babbar: Okay.

Sait Yucekaya: info at uh Audentra AI or something you know just make it like uh connectable like working and then we switch you know emails and all the stuff there later does that sound good

Samarth Babbar: Gotcha. But first, I need their approval on the UI, right?

Sait Yucekaya: uh yes Yes.

Samarth Babbar: Then I start up the dependencies cuz I still have the last iteration that I sent you.

Sait Yucekaya: Yes. And and unfortunately Yeah. Yeah. Exactly. Exactly. And unfortunately, I'm I don't like the UI, but you done a good job. It's not on you. It's on like if they want it in this way. Okay.

Samarth Babbar: Agreed.

Sait Yucekaya: I don't I don't really care if if this is the way,

Samarth Babbar: Right.

Sait Yucekaya: then they're going to have whatever they want. Exactly. So,

Samarth Babbar: Mhm.

Sait Yucekaya: I think Laura will be your point of contact for the UI uh for this one from now

Samarth Babbar: Gotcha.

Sait Yucekaya: on.

Samarth Babbar: Got

00:58:24

Sait Yucekaya: Um one one small question though about uh okay so you're going to make two or three functionalities they're like already pre-coded for example like reading the um you know what was that yeah ID front and back and then autofilling things so we are using simple LLM so you send the documents as images it scraps it in JSON format and like gets back it and like you're filling those gaps automatically. So it must be already done on the back end. So just check it. Uh and also one last thing this is related to UI but uh you know the loading bar and like animations.

Samarth Babbar: Mhm.

Sait Yucekaya: So I think you need to pay attention to that one because like those are patched from internet uh directly but which is not a good thing. So they must be asset and like the videos like animations are not uh consistent. They are like different colors, different things which are not good.

So ask Codex to make something unified in terms of animations and I used notify. Lotifile is animation and image library which is which they have like pretty good animations to be

00:59:32

Samarth Babbar: Mhm.

Sait Yucekaya: honest. Um you can check it you can check anything you want. uh you're all free to do that like you know as long as they see something like I don't know working and like playing animation which is not really bothering eye in terms of color and like stuff uh then you would be good to go actually the only thing that um UI thing is here that I can say it was an urgent urgent by the way it's not we can actually remove that as

Samarth Babbar: Okay.

Sait Yucekaya: well. So animations are not know there is nothing loading there to be honest. It's just for animation and people are going to like wait 1 second or 2 seconds or stuff. Uh so it shouldn't be a big deal.

Samarth Babbar: Nice. Welcome

Sait Yucekaya: I mean that is not the biggest problem on the UI currently on the website. So I don't really care if they wait or not. Um it's going to be like one second probably.

Samarth Babbar: Okay, you got it.

01:00:25

Sait Yucekaya: But yeah.

Samarth Babbar: You got it. Can you send this to me? The two points that you mentioned, can you send it in the in the chat so that I can remember?

Sait Yucekaya: Yeah. Yeah. Yeah.

Samarth Babbar: Yeah, I'll start incorporating them when I start working on the back end.

Sait Yucekaya: Let me let me type it to you.

Samarth Babbar: I'll try to finish this up as soon as I can, you know.

Sait Yucekaya: Sure.

Samarth Babbar: Perfect.

Sait Yucekaya: Um Oh,

Samarth Babbar: I'll see you guys in the midday check in then.

Sait Yucekaya: yes. Yes. Yes. I'm Yeah, you can you can drop if you want. If you're going to show anything, just stay like Lor is going to be back. I guess she's back already.

Laura Barcellos: The only thing here is like uh for the sprint this one that is finishing today. One of the things that I would like done is this and we couldn't. So our goal like beyond money brew and student 360 is this like all of those working Okay,

01:01:22

Sait Yucekaya: Yes.

Laura Barcellos: because I this is uh let me explain something.

Sait Yucekaya: Also, yeah, go ahead. Sorry.

Laura Barcellos: I'm not sure if everybody's aware. Uh so we have Audentraone. Audentraone is you know Edward is uh action center is burning brew uh the intelligence layer. This is Audentraone and beyond Audentraone we have three suites we have the environment suite that we are looking for it right now we have admission script that as start to explain a bit of what's going to be today with the student 360 and we have the student success suite so what I really want to do is to finish the enrollment suite that is the student collect make it done, forget about it, finish out that one except by the last intelligence layer that needs insights, genai and all of those h so we can start to think about the admission suite that will be like great part of the student 360 that we're talking about. So my top priority beyond morning brew that I will give feedback today is this make it sure that it's working that the student has a profile that it can like do it and it's completely wired on the back end.

01:02:57

Laura Barcellos: Does it make sense to you guys? If it doesn't, please let me know and then I can explain why it does make sense.

Sait Yucekaya: Yeah, one small thing actually like um so the thing is uh student 360 is actually almost completed but like this thing this stupid

Laura Barcellos: If it's if it's on your hand finished,

Sait Yucekaya: code is like yeah yeah it's it's going to be like completed hopefully like this stupid thing I'm interrogating right now why it like messed up but like for the layout parts mostly done I see and like for colors uh like probably it can be like little diverted from the yalas because like since you sent like new thing I'm like taking it like the source of truth rather than like trusting yas design right

Laura Barcellos: it will be a bit it will be a bit Yella's design has a few issues regarding like uh compositions and such and uh instead of like making her redo everything, I I just create this HTML and walk through it with a now now it's

Sait Yucekaya: Okay, got it. Okay.

01:04:09

Sait Yucekaya: Okay, good. Uh yeah, you will you will have it today. I'm like checking it, babysitting AI to make it like done correctly this time. But yeah, most most part like is completed. No worries.

Laura Barcellos: Did you ask mistakes?

Sait Yucekaya: Did you what?

Laura Barcellos: Did you ask today? I made no mistakes.

Sait Yucekaya: Oh no, I forgot that part. That's why it's like messing with me right now.

Laura Barcellos: That's why.

Sait Yucekaya: Yeah.

Laura Barcellos: Okay, guys. You work uh this is a huge meeting. So, go go go work and then we can regroup by 1 p.m.

Sait Yucekaya: Yeah. Yeah. Yeah.

Laura Barcellos: and progressing.

Sait Yucekaya: uh yeah also for the uh Samarthon boarding

Laura Barcellos: Please

Sait Yucekaya: uh so like he must show the things to you because like I'm kind of disconnected from the latest changes and like aan's feedback so you know it better uh like can I like delegate it to you if possible because I will be like on other stuff yeah you will be like more perfect

01:05:11

Laura Barcellos: go ahead.

Sait Yucekaya: fit than me in terms of like giving this feedback

Laura Barcellos: It's just it's just it's such small stuff right now like we are almost there.

Sait Yucekaya: Yeah, I I I know. I know. Yeah, I also check it's like good. I mean, yeah, I will I will prefer some perfect part.

Laura Barcellos: It's good.

Sait Yucekaya: Yeah, you know, if Aan wants it this way, he's going to have it this way so uh it's it's going to be like aligned eventually.

Laura Barcellos: Oh, yeah.

Sait Yucekaya: Okay.

Laura Barcellos: And look, uh, one of the things that I'm trying to, uh, put in everybody's head, including like Amo's head, like the cards maybe, is let's do it's something I guess we already talked say like to do the best we can with what we have and uh finish not perfect but enough to sell like UI and UX wise not working wise like UI and UX wise we can always come back and make it better you know so yeah that's that's what I'm trying to do like how can we do it like the best way we

Sait Yucekaya: I see. Yeah. Yeah, I know. Okay, then let's get to work then.

Laura Barcellos: Bye-bye.

Sait Yucekaya: Bye everyone. Happy Friday. Let me know if you need anything.

Samarth Babbar: Yep.

Laura Barcellos: Happy

Samarth Babbar: Bye.
