Audentra Product DSM

Invited Ajlan Okman Dr. Zaibis Muñoz-Isme Sait Yucekaya Vrishani Shah Dhairya Shah
Laura Barcellos Daniela Matorras Yala Zhou Samarth Babbar

Attachments  Audentra Product DSM

Meeting records  Transcript

Summary

Portal design reviewed with dashboard metrics and backend priorities established.

Student Portal UX Redesign

Critique student portal booking layout and redesign date picker. Establish data architecture for Student 360.

Dashboard Metrics and Insights

Define KPIs for admissions dashboards and adjust institutional intelligence layout. Agree on cohort financial reporting details.

Backend Development and Priorities

Direct backend development for email integration and ID autofill. Prioritize completion of the enrollment suite.

Decisions

Needs Further Discussion

- **Appointment booking workflow and UX redesign** The appointment booking interface and workflow require further refinement through UX reviews with Dr. Zaibis followed by logic testing with Ajlan.

Aligned

- **Student 360 record architecture and access rules** Student records across admissions, enrollment, and student success will use a single unique student ID with role-based tabs and filters rather than duplicate profiles.
- **Morning Brew section vertical positioning** The Institutional Pulse section will be placed above the Institutional Intelligence section in the Morning Brew layout.
- **Prioritizing Enrollment Suite Completion** The team established a priority to finish the enrollment suite, ensuring the student profile is fully working and wired on the back end before shifting focus to the admission suite.
- **Accepting Sufficient UI and UX Standard** The team agreed to focus on completing work that is good enough for UI and UX purposes to move forward, acknowledging they can return to make it better later.

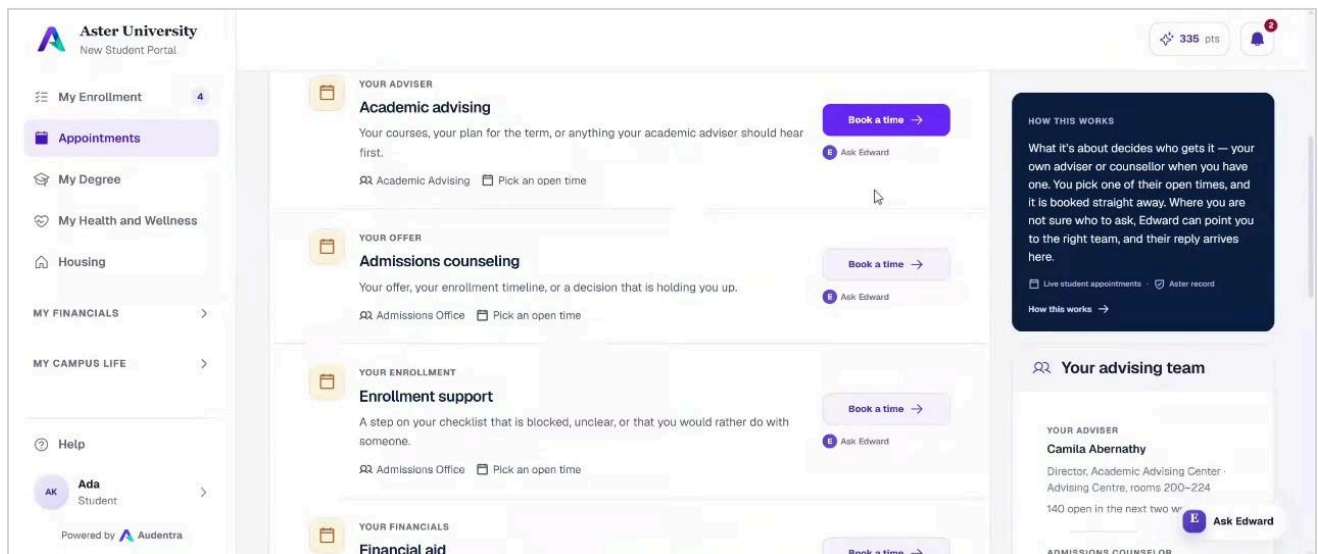

Next steps

- ☐ [Sait Yucekaya] Verify bug fixes: Confirm with Dhairya if the latest enrollment bug fixes have been pushed to production.
- ☐ [Laura Barcellos] Finalize enrollment financials: Review and secure approval for the remaining enrollment financial documentation with Dr. Zaibis.
- ☐ [Laura Barcellos] Optimize portal UX: Improve the appointment portal layout by fixing spacing, implementing a calendar-style date picker, and replacing the drawer component with a popup window.
- ☐ [Laura Barcellos] Research meeting content: Conduct a deep dive with Dr. Zaibis to define all applicable student meeting types and refine the associated content strategy.
- ☐ [Sait Yucekaya, Laura Barcellos] Redesign Student 360: Standardize the UI taxonomy for the Student 360 dashboard to distinguish between admission, enrollment, and graduated student views through effective filtering.
- ☐ [Laura Barcellos] Reorder dashboard: Reposition the institutional pulse section above the institutional intelligence section on the Morning Brew dashboard.
- ☐ [Laura] Generate news insights: Analyze new news articles to create insights using a repeatable scale and framework. Evaluate if this structure effectively populates the institutional intelligence section.
- ☐ [Sait] Send animation feedback: Send the previously discussed points regarding loading bar animations and the Lottiefile library recommendations to Samarth via chat.
- ☐ [Samarth] Finalize student portal: Complete the student portal functionality and backend wiring while seeking final UI approval from Laura and Ajlan.

- ❑ [Laura] Provide onboarding feedback: Review Samarths current onboarding progress and provide necessary design feedback to ensure alignment with Ajlans requirements.
- ❑ [Samarth] Unify animations: Replace existing internet-fetched animations with unified assets using the Lottiefile library to maintain consistent visuals and colors.

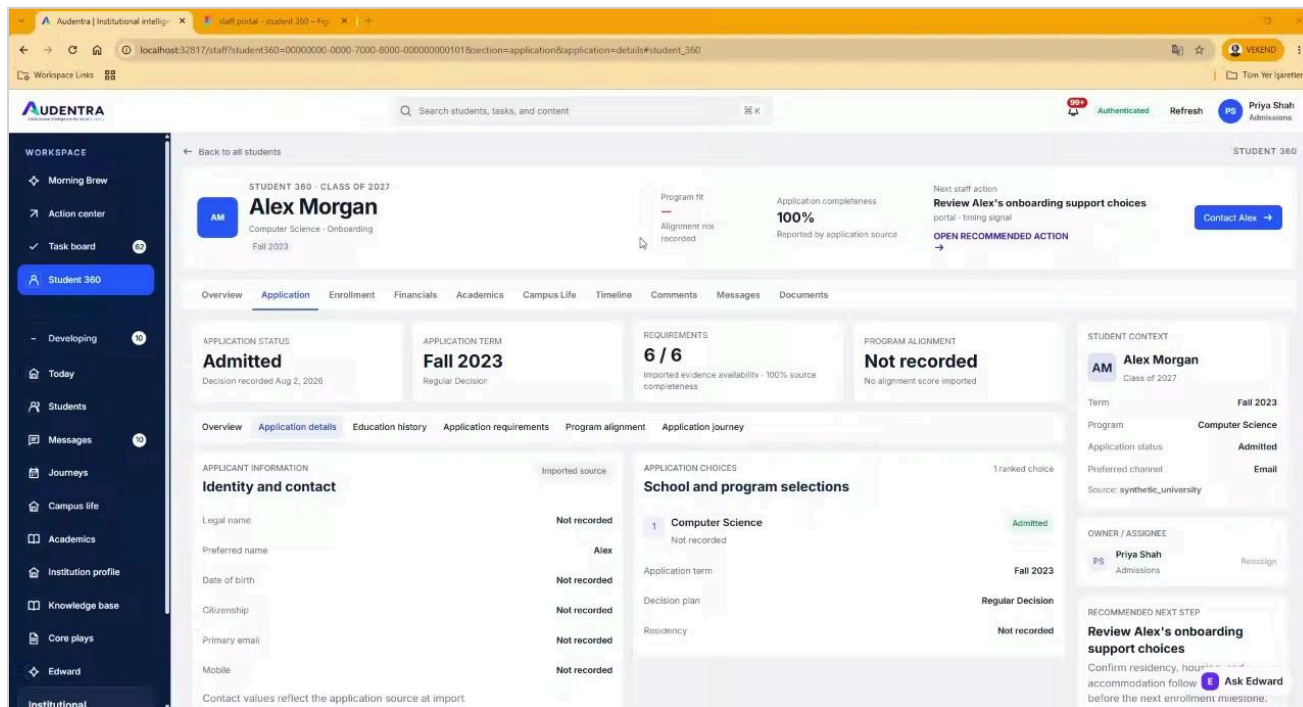

Details

- **Enrollment Financials and Approvals:** Laura Barcellos asks Sait Yucekaya to follow up on Laura Barcellos's enrollment status to secure approval, noting that while financial details were partially reviewed yesterday, remaining items still require presentation and approval. Sait Yucekaya states they will check bug fixes related to the enrollment and verify whether Dhairya Shah pushed them ([00:04:41](#)).
- **Student Portal Advisor Booking Layout:** Laura Barcellos shares their screen to review the student portal feature that enables students to schedule calls or contacts with academic advisors ([00:08:17](#)). Ajlan Okman critiques the layout for excessive spacing, repeated headings, and redundant text, and instructs Laura Barcellos to consult Dr. Zaibis Muñoz-Isme to map out all possible student meeting types across departments like counseling, wellness, enrollment support, financial aid, and international services ([00:09:37](#)).

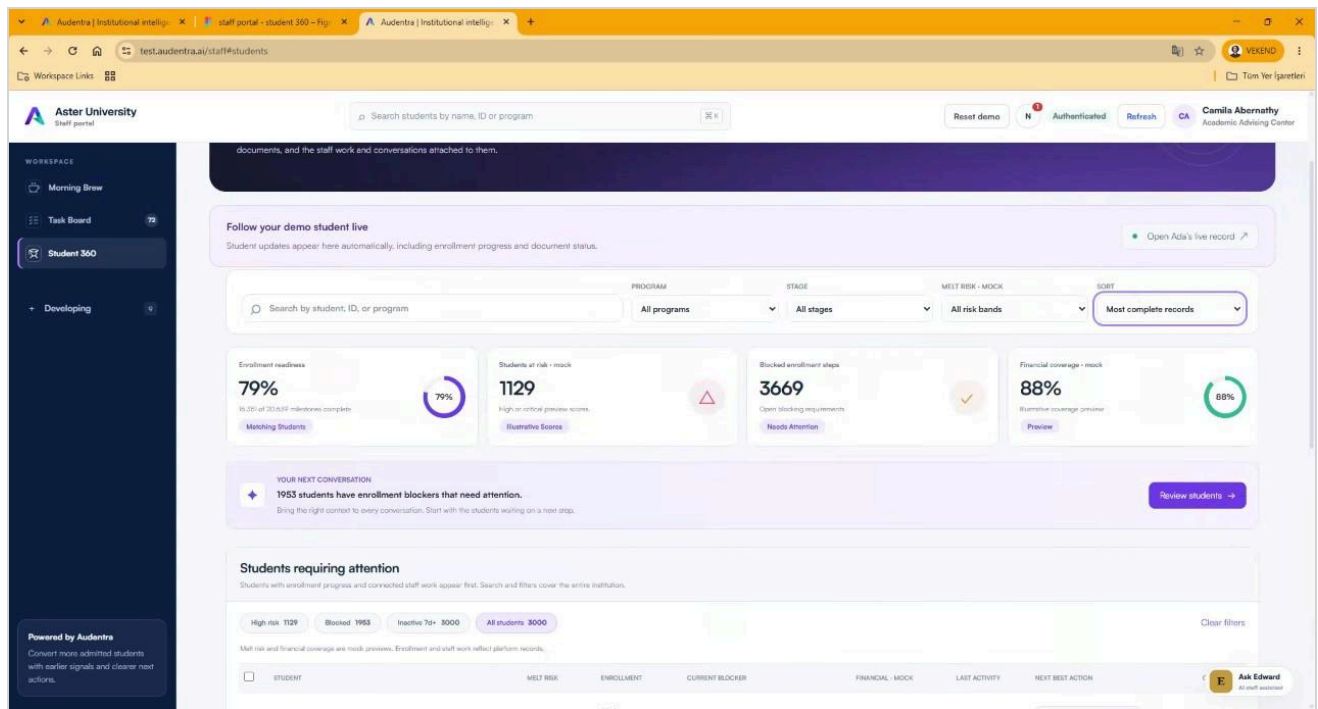

- **Student Portal Advisor Booking UX Redesign:** Ajlan Okman recommends redesigning the date picker by referencing Google Booking, Calendly, or Google Calendar, restricting the view to a five-day work week, and replacing UI drawers with popups ([00:15:55](#)). Furthermore, Ajlan Okman advises removing unnecessary sidebar text and replacing it with an agenda view displaying upcoming student meetings ([00:17:59](#)).

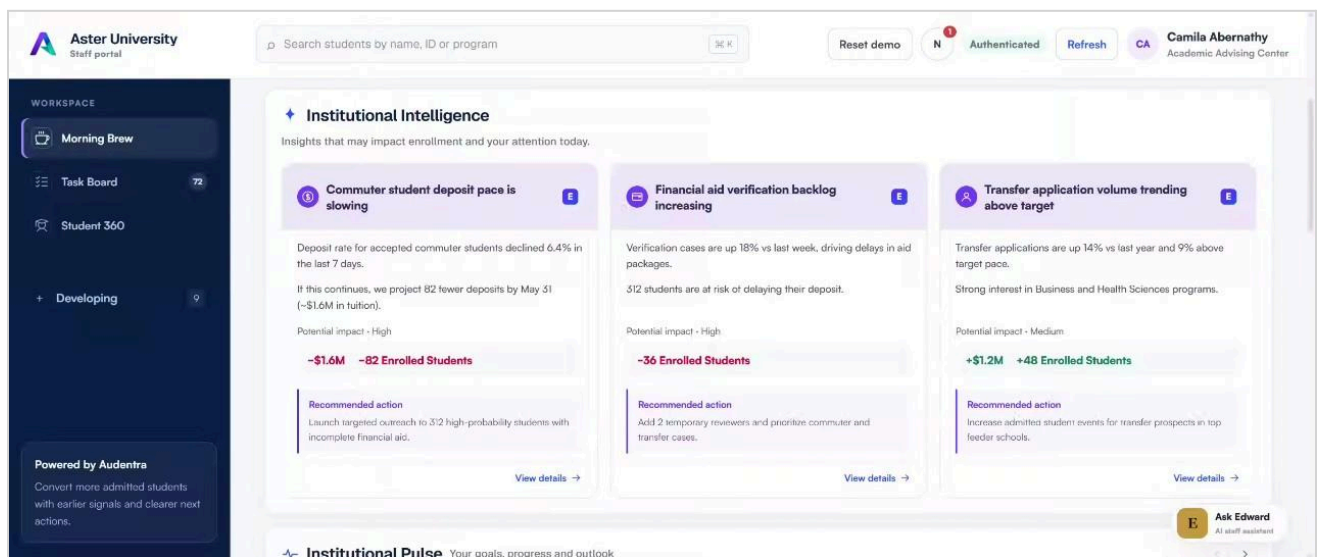

- Student 360 Implementation and Access Architecture:** Sait Yucekaya reports that Codex implemented the Student 360 design overnight, confirming that fonts match brand guidelines (00:24:22). Ajlan Okman outlines the required data architecture, specifying that Student 360 must encompass admission applications, pending enrollment students, enrolled students, and graduated students, using unique student IDs with access-based filtering instead of separate duplicated site records (00:26:09).

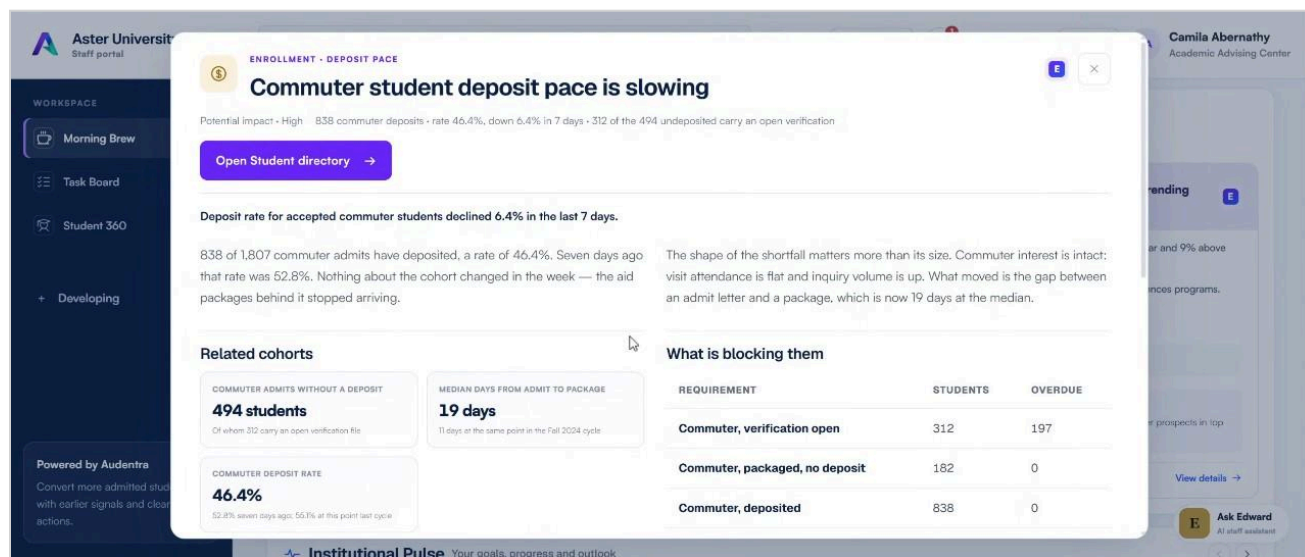

- Admissions and Enrollment Dashboards Design:** Ajlan Okman defines the necessary KPIs and metrics for admissions and enrollment dashboards, including student fit scores, progress tracking, current blockers, next best actions, and financial aid packaging information (00:31:35) (00:37:03). Ajlan Okman instructs the team to build mockups following this exact UI taxonomy for admissions and enrollment before developing subsequent modules (00:37:57) (00:40:46).

- Student 360 Menu Structure:** Ajlan Okman and Laura Barcellos establish that the Student 360 menu should incorporate a dedicated "for you" page positioned between passport and financial aid options to serve as an aggregate view, while graduate student categories should remain grayed out and unclickable for the time being (00:40:46).
- Morning Brew Insights Layout:** Laura Barcellos and Dr. Zaibis Muñoz-Isme review the Morning Brew insights and institutional intelligence layout. Dr. Zaibis Muñoz-Isme recommends swapping the positions to place the institutional pulse at the top as the primary daily check, followed by institutional intelligence, emphasizing the need to track key metrics like a stock market ticker for meetings with university leadership (00:44:33).

- Cohort Analysis and Financial Loss Reporting:** Discussing a potential financial loss of \$1.6 million, Dr. Zaibis Muñoz-Isme and Laura Barcellos agree that selecting view details must open a comprehensive report displaying affected student cohort data. This enables leadership to investigate the causes, identify preventive measures, and assign ownership or accountability to responsible individuals or teams ([00:47:52](#)).

- Onboarding UI Version 3 Spacing Corrections:** Laura Barcellos apologizes to Samarth Babbar for an issue where utilizing version 3 of the design inadvertently disrupted spacing and headings during Samarth Babbar's onboarding. Samarth Babbar notes that they quickly reverted the changes within 15 minutes and plan to finalize the onboarding UI based on recent feedback ([00:53:29](#)) ([00:55:43](#)).
- Backend Development and Email Integration:** Sait Yucekaya advises Samarth Babbar to begin backend development since the UI is functionally operational, noting that Simple Mail Transfer Protocol works reliably for email transmission without external dependencies. Sait Yucekaya instructs Samarth Babbar to use personal professional email addresses for initial testing before transitioning to a standardized corporate address like info at Audentra AI, and assigns Laura Barcellos as the primary point of contact for UI matters ([00:56:41](#)).
- ID Reading and Autofill Backend Functionality:** Sait Yucekaya notes that backend functionality for reading ID cards (front and back) and autofilling data via a simple large language model must already be functioning, where documents are sent as images and scraped in JavaScript Object Notation format to fill data gaps ([00:58:24](#)). Samarth Babbar commits to incorporating these details and finishing the work as soon as possible ([01:00:25](#)).
- Loading Animations and User Interface Consistency:** Sait Yucekaya raises an issue regarding inconsistent loading bars and animations patched directly from the internet with differing colors, requesting that Codex create unified animations using Lottie ([00:58:24](#)). Although Samarth Babbar notes that the wait time is only one to two seconds and considers

it a minor issue, Samarth Babbar requests that Sait Yucekaya send the points in their chat to remember them for backend implementation ([00:59:32](#)).

- **Sprint Priorities and Suite Architecture:** Laura Barcellos outlines the architecture consisting of Audentraone as the intelligence layer, alongside three suites: the environment suite, the admission suite (including student 360), and the student success suite. Laura Barcellos establishes their top priority as finishing the enrollment suite (student collect) completely wired on the backend before focusing on the admission suite ([01:01:22](#)).
- **Student 360 Layout and Design Alignment:** Sait Yucekaya reports that student 360 is almost completed, noting that while their layouts are mostly done, their colors may diverge slightly from Yala's design because they are using a new HTML source of truth provided by Laura Barcellos. Laura Barcellos explains that Yala's design had composition issues, prompting the creation of the new HTML guide, and Sait Yucekaya confirms they are supervising the artificial intelligence to finalize it ([01:02:57](#)).
- **Onboarding Feedback Delegation:** Sait Yucekaya requests that Laura Barcellos handle Samarth Babbar's onboarding feedback because Sait Yucekaya is disconnected from the latest changes and Aayan's feedback, making Laura Barcellos a better fit. Laura Barcellos agrees to take on this responsibility ([01:04:09](#)).
- **Minimum Viable User Interface and User Experience Strategy:** Laura Barcellos emphasizes a strategic approach to focus on creating the best possible version with available resources, aiming for a finish that is not perfect but enough to sell from a user interface and user experience perspective rather than waiting for complete functional perfection ([01:05:11](#)). Sait Yucekaya acknowledges the approach, and they agree to regroup at 1 p.m. to review progress ([01:04:09](#)).

You should review Gemini's notes to make sure they're accurate. [Get tips and learn how Gemini takes notes](#)
