Enrollment Experience Review w/ AO

Invited Aylan Okman Laura Barcellos Sait Yucekaya Dr. Zaibis Muñoz-Isme

Attachments 📎 Enrollment Experience Review w/ AO

Meeting records 📄 Transcript 🎤 Recording

Summary

Onboarding redesign prioritized magic links and identity verification and streamlined workflows.

Onboarding Workflow and Verification

Magic links and upfront identity verification improve student onboarding flows and reduce drop-off rates.

Form Layouts and Components

Standardized UI libraries and dense layouts reduce excessive scrolling and streamline data entry.

Task Sorting and Integration

Task sorting features and staff portal integrations enhance visibility and transcript processing outcomes.

Decisions

Aligned

- **Removal of immunization and accessibility from onboarding** The participants agreed to remove immunization records and accessibility requirements from the initial onboarding flow and defer them to the enrollment checklist.

- **Prioritization of identity verification in onboarding flow** The participants agreed to restructure the onboarding workflow to begin with identity verification and document upload prior to collecting profile confirmations, student photos, and other details.
- **Visible feedback for rejected transcripts** The team agreed to display explicit and prominent rejection reasons directly on user tasks when transcripts are rejected.

Next steps

- ☐ [Sait Yucekaya] Refine UI: Refine the onboarding portal user interface by condensing layout spacing, creating a standardized library for form elements, and improving visual hierarchy to reduce scrolling.
- ☐ [Yala] Create Backgrounds: Create virtual meeting background templates for the team to use.
- ☐ [Sait Yucekaya] Review Designs: Send examples of third-party authentication and form designs to Ajlan for review.
- ☐ [Sait Yucekaya] Update Workflow: Revise the onboarding workflow to prioritize identity verification, starting with document scanning and data confirmation before proceeding to other steps.
- ☐ [Sait Yucekaya] Investigate missing data: Investigate why due dates and task durations are disappearing from the system.
- ☐ [Laura Barcellos] Write review comments: Draft notes based on the meeting transcript to provide feedback.
- ☐ [Laura Barcellos] Send review comments: Provide the drafted feedback to the design team.
- ☐ [Sait Yucekaya] Develop appointments: Continue working on the appointments feature until Wednesday.
- ☐ [The group] Improve feedback visibility: Implement a more visible notification system for rejected document submissions so users are clearly informed of the reason for rejection.

Details

- **Onboarding Workflow and Account Creation:** The current account creation and sign-in flow after an offer letter is sent needs optimization to avoid forcing users to create an account before deciding to accept or reject an offer. Ajlan Okman noted in their review that admission specialists send offer letters, and clicking the accept link should lead to a secure magic link onboarding page rather than directly to an account page ([00:12:37](#)). Sait Yucekaya

demonstrated the current browser deployment (00:00:00). Ajlan Okman suggested that step one should welcome the student with animations like confetti and prompt them to create an Odentra password while confirming their legal name, email, and telephone number (00:12:37). The consensus is that the workflow must start with a welcoming magic link leading to an onboarding sequence before requiring full account creation (00:14:27).

- **Welcome Page and Social Media Sharing Incentives:** The current welcome design is too bland and fails to excite newly admitted students or incentivize engagement. Ajlan Okman argued in their assessment that the box on the right displaying student information lacks a compelling hook and suggested replacing it with a larger popup box featuring a catchy slogan like welcome to the family (00:15:41). Ajlan Okman proposed adding an explanation where students share their story on social platforms including LinkedIn, Instagram, X, and Facebook to earn bookstore points (00:17:03). Sait Yucekaya and Laura Barcellos observed the screen share (00:00:00). The consensus is that the welcome page will feature congratulatory visuals like confetti and mockups of social media posts to encourage sharing in exchange for bookstore points (00:17:03).

- **Personal Information and Document Verification Screens:** The personal details screen has formatting inconsistencies, and document uploads require better visual feedback. Ajlan Okman pointed out in their evaluation that Sait Yucekaya's name is oddly bolded in a text box and recommended clearly separating legal names (first, middle, last) from preferred names and pronouns (00:18:46). Regarding document uploads, Sait Yucekaya explained that uploaded documents are parsed every 5 minutes, prompting Ajlan Okman to argue that the screen must visually display the parsed fields and document previews side by side to confirm matches (00:21:16). The consensus is that the personal details page will explicitly distinguish legal and preferred names, and the document upload screen will show side-by-side previews and parsed data (00:18:46).

The screenshot displays a web browser window with multiple tabs open. The active tab is 'test.audentiaaai/onboarding'. The browser's address bar shows the URL. The page header includes 'Workspace Links' and a user profile icon labeled 'VERKEND'. The main content area is titled 'Tell us about you' and contains a form with the following sections:

- Your name:** Includes fields for 'FIRST NAME' (containing 'Salt'), 'LAST NAME' (containing 'Yucekaya'), and 'PREFERRED NAME' (containing 'Salt').
- PRONOUNS, OPTIONAL:** A dropdown menu with the selected option 'I'd rather not say'.
- Your ID:** Includes a 'CITIZENSHIP STATUS' dropdown menu with the selected option 'Choose one'.
- Add a photo or a scan:** A section for uploading a photo or scan, with a note: 'A clear photo of the whole document, with all four corners in frame.'

A sidebar on the left titled 'Let's get you set up, Salt.' shows a progress list with 10 steps: 1. Offer, 2. About you, 3. How Aster reaches you, 4. Housing, 5. Campus life, 6. Emergency contacts, 7. Family permissions, 8. Your student photo, 9. Review & sign, 10. Deposit. A 'STUCK ON SOMETHING?' section includes an 'Ask for help' button. The bottom of the page shows a Windows taskbar with various application icons and a system tray displaying the date and time (8:09 PM, 9/21/2026).

- **Form Layouts, Contact Information, and Profile Pictures:** Forms require excessive scrolling, and input fields take up too much empty space. Ajlan Okman recommended converting United States state lists into dropdown menus and condensing address fields to fit on a single row rather than wasting space (00:22:28). Ajlan Okman shared their screen showing a comparable backend onboarding form used for a weekend project, suggesting that contact channels including email, text message, and calls use icon-based selectable boxes instead of radio buttons. Laura Barcellos and Sait Yucekaya reviewed the layout options (00:23:49). The consensus is that forms will be redesigned to reduce scrolling, use dropdowns for states, and incorporate cleaner, denser layouts with icon-based selection boxes (00:22:28).

02 / 08 - YOUR DETAILS

Let's get the details right.
Enter your name exactly as it appears on your legal documents.

Legal first name * Alex Middle name / initial Legal last name * Morgan

Date of birth * 05/14/1998 Personal email * alex.morgan@example.com Phone * US +1 (202) 555-0142 ✓
Example: (201) 555-0123

Home address

Street address * 100 Example Avenue Apartment / unit 4B

City * New York State * New York ZIP code * 10001 Country * United States

- Student ID Emulation and Profile Integration:** Profile details and document uploads are currently separated across multiple pages that can be streamlined. Ajlan Okman proposed merging the role and department selection tab with the major and school tab into a single initial page where uploaded headshots automatically crop to fit a neat profile view. Ajlan Okman suggested adding an emulator showing a student ID design with the university icon, using the student's preferred name for the profile while retaining legal names for official college records. The consensus is that profile details, role selection, and headshot cropping will be combined into a streamlined initial page featuring an emulated student ID (00:26:14).

- Housing Options Section:** The housing section contains too much top-level information and a rigid form structure. Ajlan Okman noted that categories like living on campus, off-campus, commuting, and living with family present too much information upfront. Ajlan Okman suggested replacing the radio-button form structure with three distinct, clickable flavor boxes, allowing students to defer specific housing decisions. Sait Yucekaya acknowledged the feedback. The consensus is that the housing section will be redesigned using three clickable options to reduce clutter and allow students to defer detailed housing choices (00:27:55).

- Accessibility Services and Immunization Records:** Handling sensitive medical documentation and accessibility requests poses privacy risks if visible to all staff. Sait Yucekaya introduced the accessibility service section, which allows students to indicate disabilities and upload documents. Dr. Zaibis Muñoz-Isme expressed concern in their remarks that medical documents should not be widely visible to all users, suggesting students instead schedule a meeting with a counselor (00:30:20). Ajlan Okman suggested using role-based access control to limit accessibility document visibility exclusively to the counseling team (00:31:38). Dr. Zaibis Muñoz-Isme noted that many schools lack advanced customer relationship management systems and maintain separate, locked systems for counseling and health (00:32:40). The consensus is that immunization records will remain as an enrollment record upload, while accessibility requests will be streamlined into a meeting scheduling feature restricted by role-based access control to protect student privacy (00:31:38).

- Form Design Standards and UI Library:** Creating custom forms repeatedly without a standardized design library wastes time and tokens. Ajlan Okman referenced the Orion design template library used at United, where input types feature standardized icons such as calendars for dates, clocks for times, mail icons for emails, and phone icons with country selectors for phone numbers alongside format checks (00:37:37). Ajlan Okman argued against spending time building custom components with Yella without a standard library. Sait Yucekaya agreed to send a couple of font and style options for review. The consensus is that the team will establish a standardized UI form library with consistent icons and format checks to avoid redundant design work (00:40:29).
- Student ID Distribution and Document Requirements:** The platform needs a secure way to collect student photos and determine required identification documents based on student nationality. Dr. Zaibis Muñoz-Isme noted that schools are shifting toward mobile IDs or portal photo uploads, though physical IDs require pickup at an ID office (00:41:48). Ajlan Okman explained that backend tools can automatically clean headshots by removing backgrounds, glasses, or AirPods for ID purposes (00:43:35). Ajlan Okman proposed giving students options to receive electronic IDs, shipped physical IDs, or pick them up at the security office. Furthermore, Ajlan Okman and Sait Yucekaya discussed categorizing students by United States-based versus international status so the system requests appropriate documents, such as state IDs or driver's licenses for domestic students and passports for international students (00:44:35). The consensus is that the onboarding flow will incorporate automated headshot cleaning for student IDs, offer delivery preferences, and dynamically adjust required identification documents based on student nationality (00:43:35).

Aster University

 Your ID is stored, and it could not be read automatically. Type anything missing yourself; a person reviews the original.

- Redesigning Onboarding Order with Identity Verification:** The onboarding sequence currently involves excessive scrolling and should be reordered around identity verification. Sait Yucekaya proposed finalizing layout feedback by the end of the day and addressing additional feedback at the daily scrum meeting (00:48:12). Sait Yucekaya suggested integrating third-party authentication services like ID.me, where users verify their identity upfront by uploading ID documents that automatically populate information fields (00:49:52). Ajlan Okman supported this view, explaining that after accepting an offer, the workflow should immediately verify identity using translucent camera guides for driver's licenses (front and back) or passports (with machine-readable zone capture) depending on whether the student is domestic or international. The consensus is that the onboarding flow will be restructured to prioritize upfront identity verification using document capture and automated data extraction before collecting other profile details (00:50:59).
- Refining Onboarding Steps and Enrollment Checklist:** Certain complex documents clutter the onboarding process and should be deferred to the enrollment checklist. Ajlan Okman emphasized using a snowball technique to ask for easy-to-provide information with least resistance first, such as emergency contacts, before tackling campus life interests and student clubs. Sait Yucekaya and Ajlan Okman agreed that hard-to-upload documents like immunization records and accessibility forms should be excluded from initial onboarding and left to the enrollment checklist (00:53:37). Sait Yucekaya summarized the revised flow, including ID photo capture, campus life interests, housing, and policy signatures like the Family Educational Rights and Privacy Act (00:55:05). The consensus is that complex document uploads like immunization records will be moved to the enrollment checklist, while

initial onboarding will focus on low-friction items like emergency contacts, ID photos, housing preferences, and policy disclosures ([00:53:37](#)).

- **Deposit Integration and Next Steps:** Handling deposit payments within the portal requires integration with institutional financial systems. Laura Barcellos asked whether the deposit step would integrate with tools like Stripe. Ajlan Okman responded that integration would likely connect with the institution's financial system, such as Touchnet, to verify in the backend whether deposit fees have been paid, noting this is a future consideration. The consensus is that deposit verification will eventually integrate with institutional financial systems like Touchnet to check payment status in the backend ([00:56:39](#)).
- **Task Sorting Features and Critical Path Analysis:** Ajlan Okman explained the three task sorting options: "smart order" (based on critical path analysis, dependencies, duration, and due dates), "due soon" (sorted by due dates), and "fastest" (sorted by quick completion times such as uploading a driver's license) ([00:58:11](#)). Laura Barcellos emphasized that this is a critical feature backed by studies showing that providing a specific path reduces student drop-off rates. Sait Yucekaya noted that tasks currently lack estimated completion times, which causes "due soon" and "fastest" sorting to function identically ([00:59:39](#)).
- **System Session Timeout Issue:** During the demonstration, Sait Yucekaya experienced an unexpected logout from the system. Laura Barcellos suggested reviewing the application's session expiration settings to determine why users are automatically logged out after a specific amount of time ([00:59:39](#)).

The screenshot shows a web browser window with multiple tabs. The active tab is titled 'test.audentra.ai/sign-in'. The page is titled 'student account.' and contains a form for creating a new account. The form fields include 'Email address *' (with the value 'sait.yucekaya@vekend.com'), 'Mobile phone *' (with a masked number), 'Password *' (with a masked password), and 'Confirm password *' (with a masked password). Below the form is a blue button labeled 'Create account and start onboarding'. A green box below the button contains the text 'ACCOUNT VERIFICATION' and 'Email and SMS verification statuses are already tracked. Delivery will be connected when those providers are configured.' At the bottom of the page, there is a footer with '21°C Parçali bulutlu' and a Windows taskbar showing the time as 8:04 PM on 9/21/2026.

- **Staff Portal Integration and Transcript Processing:** Sait Yucekaya demonstrated the onboarding process and transcript uploads using a dummy account, confirming that

submissions correctly integrate with the staff portal for review. Sait Yucekaya also showed a real transcript processed by Ada and Edward, verifying that data is successfully written to the database and accessible on the staff side under the enrollment and financial aid dashboard (01:01:52).

- **Task Rejection Feedback and Visibility:** Sait Yucekaya and Laura Barcellos discussed the handling of rejected tasks, such as rejected transcripts (01:03:27). Laura Barcellos argued that rejection feedback must be highly visible directly on the task interface with specific reasons explaining why a transcript was rejected, ensuring that users do not mistake the notification failure for a system bug or feel unsupported by the university. Sait Yucekaya agreed that rejection messages must be clearly presented on the task itself (01:05:35).

- Meeting Agenda Restructuring and Next Steps:** Laura Barcellos proposed splitting the review sessions, suggesting that the team focus on onboarding and enrollment first, and schedule a separate session for appointments, degree planning, and review workflows to maintain attention. Sait Yucekaya agreed and committed to working on the calendar appointment feature ahead of the end-of-day meeting. Additionally, Ajlan Okman assigned Laura Barcellos to write summary notes based on the meeting transcript to send back to the design team ([01:06:41](#)).
