Review Call - Transcript

00:00:00

Sait Yucekaya: do it. I'm taking that whole video so that it shows like where it's like actually

Ajlan Okman: Okay. So, let's get started.

Sait Yucekaya: Yes.

Ajlan Okman: So, first of all,

Sait Yucekaya: Sorry.

Ajlan Okman: I think this is spot, right? So, there is no need to scroll too much. Everything the line spacings and everything is really small for factor. I like those. So, uh just I'm thinking about like you know how we can be the good stewards of our product and show it. uh even more and more I will suggest instead of having the sort in a drop down we should have it like a chip that they can like ch uh choose directly if they want to sort it the f sorted the

Sait Yucekaya: Okay.

Ajlan Okman: smart with like you know AI and see what's the critical path and what test they need to do first or if they need to sort it by the do right So this way like they can see all three side by side. uh on the same perspective uh you click like all tasks action needed in review when done but I think you already have like you know group tasks over there right so those are group so I'm not sure

00:01:19

Sait Yucekaya: Yeah.

Ajlan Okman: if needed but I'm not opposed if you want to keep it you can keep

Sait Yucekaya: Yeah. The UX research that I made like I took couple suggestions from other friends like who are like mobile and web developers. So they it's like 50 50%. like the the previous iteration was like to-do and like interview and done is like combon style and I didn't like it to be because all the to-do apps on the Google Play and App Store are

Ajlan Okman: Mhm.

Sait Yucekaya: almost like a list view.

Ajlan Okman: Yeah.

Sait Yucekaya: So I made it like that because we will have like tags here later. So I just attach these two. But for example, this can be like a little longer like action needed or like you can sort like due dates past you know that also that also like not presented here.

Ajlan Okman: Yeah.

Sait Yucekaya: So once we have like five of it these two are like just the additions but I can remove them as well.

Ajlan Okman: Uh so like you know I just I think maybe need to understand the logic.

00:02:20

Ajlan Okman: So for example action needed is they need something from me right? Uh,

Sait Yucekaya: Yeah.

Ajlan Okman: and then when I take a look, it's like the fi final transcript. Action, but fur doesn't need action, but they're both in the to-do stage.

Sait Yucekaya: Yeah.

Ajlan Okman: So then like uh what is fura? What's the difference between the fura and the final transcript?

Sait Yucekaya: Yeah. Yeah, probably like when you are in review and it got rejected. Uh we it's it does it was decided before but we can change it. So it moves up to to-do again so that you can see it but it like action needed. So you iterated it one time but

then it got rejected or some reason it failed then okay please like re-upload it or I don't know like recheck it something going on with this

Ajlan Okman: Got it.

Sait Yucekaya: task.

Ajlan Okman: Okay. So I think maybe like you know we need to have more clear descriptions of like what we call what in our UX language.

00:03:26

Ajlan Okman: So if you want I think uh the other good thing is not actually if you want I think we have to have it. Uh we are missing the due date over here. So I will suggest due date and then the estimated time that it takes. We put them side by side and then you can club the how many points they going to earn with the action button. So maybe like Yeah.

Sait Yucekaya: dinosaurs. I see

Ajlan Okman: So maybe the action button can be the same size or a little smaller size and then it says like you know earn level up points by doing now or something like that. But due date missing is I think the biggest thing that we have to add.

Sait Yucekaya: Yes. Good for

Ajlan Okman: Uh the other item is do we want to put some item or like something to show what is this for? You know like how we generally segment these tasks.

Sait Yucekaya: uh you mean like the question mark that when you hover it ask it explains you

00:04:46

Ajlan Okman: No,

Sait Yucekaya: the specific task. Is it that one?

Ajlan Okman: for examp this this is just them ideating like this

Sait Yucekaya: Mhm.

Ajlan Okman: is not like a feedback. So you know like how we divide the tasks based on which project they going to go in the back end which is like enrollment, student life or like you know financial aid such and such. Do we need a similar logic over here or doesn't matter it directly goes back.

Sait Yucekaya: Yeah, I believe like these icons are for that one. You know the payments, housing per like stupid.

Ajlan Okman: I see. Okay. I thought those icons are for the different test types issue type cuz like one of them has like file file upload, you know, other one has a pen but you're like the housing has housing.

Sait Yucekaya: Yeah. Like I don't believe like we need to like separate those for the each of them because housing is like housing but I I know it's like for I don't know students lifestyle or something. I believe this is K.

00:05:52

Ajlan Okman: Yeah, suggest like maybe we use those icons for the task types. I think good idea. So uploading final transcript all the uploads that we are going to document processing will have the same icon.

Sait Yucekaya: Yeah.

Ajlan Okman: All the things that they have to review and sign will have the same icon. All the things that they have to pay something will have the same icon. All the things that they have to upload something like a form like housing selection, touch and sight selection will have the same icon.

Sait Yucekaya: Yeah. Yeah, that works. But once staff is like creating this uh enrollment task, they choose, you know,

Ajlan Okman: Yeah.

Sait Yucekaya: the items probably. So yeah, they have like limited options. So it should be good.

Ajlan Okman: All right. And if you click the smartest. Yeah.

Sait Yucekaya: this.

Ajlan Okman: Yep. So the old UI we had explained why we picked that why it was smart, you know.

Sait Yucekaya: Yeah.

Ajlan Okman: Do you remember it said like you know four tasks depend on this such and such.

00:07:13

Ajlan Okman: So the critical pet analysis

Sait Yucekaya: Uh yes, but do student need to see it? It's more like we have like some prerequisite ones and like you need to complete the once to unlock this. So we can't like explain what smart is. Okay. Like we have previous ones and like the ones that you can complete now. So we are doing like based on the best selection. It's like you know when you go to sahibnan.com and you see the list it says okay like there's suggested sorting you know you don't know the algorithm behind it but it shows you something specific to you and you go along with it. If you want you can change it with whatever to your liking.

Ajlan Okman: Yeah, like you know we can do it like that too. It's it's fine. I'm just trying to see like how we can show that we are smart and build that trust right bring like credibility UI wise it looks good but you know those like nuances I don't think that helps us tell the story that we are missing so like the due date you know

00:08:28

Sait Yucekaya: Yeah, that that's missing.

Ajlan Okman: uh yeah and then like what are those like coffee beans with like 100 plus pts you know Oh

Sait Yucekaya: Yeah, those are actually the points, the aster or the north bridge points.

Ajlan Okman: yeah,

Sait Yucekaya: Yeah. Yeah.

Ajlan Okman: the reason why that they will like discard their own system. So let's I don't know Zaibisuh I think you are more in this field but most of the colleges have like their own tracking system for enrollment either they are using something is dam tracking these or

Dr. Zaibis Muñoz-Isme: No, they're using like Salesforce. They're lo using um Slate Illusion. Um

Ajlan Okman: illusion I think are the big ones that I got exposed before.

Dr. Zaibis Muñoz-Isme: yeah, actually I was looking at the conference yesterday and I was like, I'm going to write down all of these companies so I can see who does what and who because you know, one of the questions is like, do where do you want to be? do you want to be?

00:09:38

Dr. Zaibis Muñoz-Isme: Which competitors do you not want to be next to? And I was like, I don't know what the f*** these other people do. So, I have to look them up. But, Slate, Illusion, Salesforce, uh,

Ajlan Okman: Cool.

Dr. Zaibis Muñoz-Isme: Banner is more the C like, and it's usually more for like financials. Um, that I know of. Only one school is using um, Workday, and we're one of the schools that's using Workday student to like be the CRM. uh uh colleague is another platform. So yeah, all everybody's kind of tracking in their own systems. They're trying to use something like navigate which is an EAB product. Um but I think poor implementation and adoption doesn't make the product that useful.

Ajlan Okman: Yeah. So like for them to leave those products and come to us, we have to have like couple important modes. So

Dr. Zaibis Muñoz-Isme: has to be has to look clean,

Sait Yucekaya: Thank you.

Dr. Zaibis Muñoz-Isme: has to be easy to learn, right?

00:10:38

Dr. Zaibis Muñoz-Isme: It cannot be the hub. We cannot be the hubspot of

Ajlan Okman: Yeah, exactly. So I think looks clean. This looks pretty clean. Uh easy to learn. I think needs to come with those like you know the howtos like if you click on this does it

Sait Yucekaya: Oh, I forgot the show.

Ajlan Okman: ex

Sait Yucekaya: Yeah, yeah, yeah. Sorry, my bad. What was the name? Just a second. I did it like it's like walking. Yeah, walk through. Sorry, I forgot it. And sorry for interrupting. I wish it was going to be here. Yeah, you will see what is going on when you open the thing. And that is one feedback that I got from Shan like she was asking okay what is what the hell is going on in this website like she was asking okay give me like step by step tour so that I

Dr. Zaibis Muñoz-Isme: tour.

Ajlan Okman: Yeah.

Sait Yucekaya: understand I generally skip those so it was my first time doing that.

00:11:34

Dr. Zaibis Muñoz-Isme: Yeah,

Sait Yucekaya: So it explain you cleanly. Okay, this is it.

Dr. Zaibis Muñoz-Isme: I feel like the tour coupled with Edward will be good for like learning.

Ajlan Okman: Thanks. like you know this is fine but uh again like our biggest mo over here

Sait Yucekaya: Just take

Ajlan Okman: is we incentivize this

Dr. Zaibis Muñoz-Isme: So, is are we saying what our new design is going to look like?

Ajlan Okman: by I will be

Laura Barcellos: This is from the university standpoint.

Ajlan Okman: honest with yeah but like you know

Sait Yucekaya: Yes, for a different university.

Ajlan Okman: looks good that like how do you call it uh it's like unified right so we can decide that but we are missing the functionalities so

Sait Yucekaya: Okay.

Dr. Zaibis Muñoz-Isme: Yeah.

Ajlan Okman: when you guys make the design you have to put like the largest rocks in the seat first. So over here I feel like you know we are not putting emphasize on uh how they're earning these points and such.

Laura Barcellos: The gamification part.

Ajlan Okman: So what does the yeah the gamification part is the biggest sell point.

00:12:46

Ajlan Okman: The second sell point is critical pet analysis. I don't even know like how does this smart sorting logic work right now. Okay, maybe we don't have to show it to students but at least we have to show it to me that how it works. How do you calculate that? So I have faith in the system and then the reason why I say like you know uh tell why we pick it best for them because then like you know we show this functionality advertise it that like we are smart you know when you want to buy to fiat from uh what's the

Sait Yucekaya: Mhm.

Ajlan Okman: name of it.com maybe you may not need it

Sait Yucekaya: Yeah.

Ajlan Okman: right uh uh but over here I think it's a good way to either they need it or not to show that we are smart we are better than them and if you don't think it like that that's fine let's not put it but then like you know we have to show that hey this is the reason why you have to buy this and every pixel is a real estate right so we have to use it in a way that tells the odentra story that we are better than banner we are better than illusion we are better than Salesforce doing this.

00:14:05

Ajlan Okman: So, I have that like enrollment calendar on the right. That's perfect. I like it. Like it's a new feature. Uh but missing the due date in each cart is I think like you know that that

Sait Yucekaya: Yeah.

Ajlan Okman: that

Dr. Zaibis Muñoz-Isme: Yeah.

Sait Yucekaya: And that is my bed. Exactly.

Ajlan Okman: Yeah. And then like you know uh if I feel afraid, scared or I if I don't know like if I can take that task right now there is no like how to that I can see like for example how to upload my transcript or what's needed from my transcript like so when I click on the previous design that you guys changed which took us 10 minutes with GPT had like those how to inside like I don't mind the looks looks looks clean right so this looks more unified and then I guess this is also easier for embedding them with the hex code but I need to understand like what we are trying to accomplish and visually we have to be able to add some dimensions so for example enrollment prerequisite enrollment deposit like why I cannot pay it now.

00:15:31

Ajlan Okman: So where is that logic coming from? If you scroll down a little bit, it says be prerequisite

Sait Yucekaya: Yeah, because it has prerequisite. Uh but if you want we can like

Ajlan Okman: deposit. Yeah, I don't think that prerequisite is accurate.

Sait Yucekaya: But one question though. So the due date and like how to parse are good that I need to add that is 100% accurate but like the client here is is it student or is it like the institution sorry I'm just again like thinking out loud because if I'm a student I don't care how smart this is or do I uh this is just a question because

Ajlan Okman: Oh,

Sait Yucekaya: actually Dr.

Ajlan Okman: this

Sait Yucekaya: Zavis is like more uh knowledgeable in this term because I'm just checking okay what

Dr. Zaibis Muñoz-Isme: Mhm.

Sait Yucekaya: I need to do and like if I just see it that is fine for me but the rest is

Dr. Zaibis Muñoz-Isme: Yeah.

Sait Yucekaya: as you said important like the points if it is not explainable that I can put something here maybe on your calendar or work on it which is good but I understand some there something I am not gaining and I can like make it like popish because one thing that we are missing uh on the previous design is we tried put everything at once.

00:16:48

Sait Yucekaya: But for example, once I complete one thing or once I like walking through there, I can emphasize that okay, this is the points that you can earn and like when you earn it, you can convert it to some bookstore credits and that's it.

Ajlan Okman: Mhm.

Sait Yucekaya: We I mean we are going to show this one time but we are showing it whenever someone like opens this website. So we're actually wasting pixels here. Not actually but like we have all the things here we have all the control but if you're going to

like emphasize it one time so think about like for example this 10 minutes stuff it's like understandable of course but like I'm not saying here like okay this takes 10 minutes all the time same thing for here like once the student understand okay the points are some currency that I can use then that's it so when you complete it I will of course show some popup okay like you completed it you earned this much you're or I can show it like you can buy with this points like this book or this thing or etc. this kind of stuff.

00:17:51

Sait Yucekaya: So making it more like animatable is better than putting it everything into like here. But that is also like just thinking out loud. For example, um when I let's say complete this one and I earn the points and I see it and a popup, then that's it. I don't have to see it anymore on this website. Something like this. I was thinking by the way, that's why like the next item after we get it approved, I will work on the each this is not the final thing each enrollment parts enrollment website. So final transcript UI how it will look fair access how it will look you know the upload file and etc etc the detail part so I think that must be there

Ajlan Okman: Okay. So, what are we trying to solve here first?

Dr. Zaibis Muñoz-Isme: Mhm.

Ajlan Okman: Maybe like warm up me to the idea of that. So, what was the problem with Yeah.

Sait Yucekaya: uh on on this page

Ajlan Okman: No. What was the problem with the old enrollment experience?

00:18:48

Ajlan Okman: So why we

Sait Yucekaya: um yeah let's me open it first of all Yeah, the design but we're getting it over. So for example here it's like like the attention is like distributed everywhere. So I'm reading here, I'm reading here, I'm reading here but like when I show it to someone who is like who is not technical and who doesn't understand like this computer that much uh they're like what what the hell is going on with this website? Okay, they understand each by component by component, but it's like exhausting for the eyes. What is going on here? Of course, I understand. It's like a simple to-do state thing, but there are like too many details that I need to put attention. So, it's not like ADHD friendly. I may put like so for here for example when I showed this to couple people like which they don't they don't have any idea about the website they were like okay this points this thing what is going on here they were like reasoning about it which we don't like we wanted like okay at one shot you will understand what is going on of course not all the details but it's like simple to-do list you know so what I was aiming is like making it vanilla making it understandable and not stressing for the students.

00:20:09

Sait Yucekaya: Uh but I'm not the you know judge here to see that. What I'm saying is like in UI wise what I would like make make it better was this and like for functionality wise that you mentioned I think student do not need to understand everything at once once they see so for example when they select this smart or I don't know like we can make it like this default and when they put smart let's say we can pop up okay this smart do you know how we customize it for you something like that you know one popup and they understand and they get over it. They don't see it every time they uh open this website. Something like this. So, I'm actually splitting the understanding part. Um yeah.

Dr. Zaibis Muñoz-Isme: I think I think my concern though is I don't right now most of the products out there on the market look really basic and I don't want ours to look basic and maybe I'm also like attached to the previous design already. I like how it looks.

00:21:09

Dr. Zaibis Muñoz-Isme: Um the other thing is that students have we have to they have to get used to it. Like they're going to get a million things thrown at them from the time that they go to college. So it's also like welcome to the real world. Like you have to focus. So, I don't I see what you're saying, S. I I get it, but I don't think that I think that we're splicing it nicely on the original design already to show like here is what is top of mind. Here's what you have to do first. Um, now, if we want to make like Aan was saying the the do like right there, the do soon, the like most important, like how we want to rank it, maybe we can do that. or even moving the gamification to the bottom left of the screen is fine, but I don't think we need to make it vanilla because one, I think that that it's not going to set us apart in the market. Like as a market, it's they're going to be like, why would I buy this?

00:22:10

Dr. Zaibis Muñoz-Isme: Like my IT people at my job, at my school can make this for me. So that's my only concern is like I don't want to make it simple. Why would they want to buy something that looks so simple?

Sait Yucekaya: Um yeah good point actually but one small question that I may need to

Dr. Zaibis Muñoz-Isme: Mhm.

Sait Yucekaya: understand. So our client is not students right. So what we are doing is student to like remove their friction that is good but for

Dr. Zaibis Muñoz-Isme: Mhm.

Sait Yucekaya: staff we have like not for staff but for university we have like really good tools and we are not going to make it like easy as this is for sure because those are like you know Jay-Z students um they will see all the tools and they will remove friction etc. But like I said, I'm like student persona. I come here. By the way, both website I understand. Uh

Ajlan Okman: See this like what what is that like m herbal life the pyramid sch Okay
okay

00:23:07

Dr. Zaibis Muñoz-Isme: Yes.

Ajlan Okman: so when you make the best milkshake with herbal life you're not selling that to like actual people that would drink it you first sell it to like sell the idea of having a pyramid scheme or is MLM type of business to a person who will need to recruit

Dr. Zaibis Muñoz-Isme: Yeah.

Ajlan Okman: more people who will need to recruit more people eventually somebody will drink that milkshake. So first like if you're in this like business forget about student right so who pays the money for them to go parent and then who pays the

Dr. Zaibis Muñoz-Isme: I think

Ajlan Okman: money uh who are they paying to is school and then school is paying

Dr. Zaibis Muñoz-Isme: they Yeah.

Ajlan Okman: to us so our main client is school so z like amunition to show that hey like you know we are different it necessarily doesn't mean that you have to cancel your subscriptions memberships contract. We are different than yeah eventually like you know that's your

Dr. Zaibis Muñoz-Isme: But eventually you want them to like cancel their contracts.

Ajlan Okman: call but we can be your side chick.

00:24:11

Ajlan Okman: You can date with us until if you like and then you can cancel your contract and then we can get married to you know and do all of that whatever it is.

Sait Yucekaya: Yeah.

Ajlan Okman: So these are my nonpolitically correct all analogies. So that's why like I think we need to look different.

Dr. Zaibis Muñoz-Isme: Get

Ajlan Okman: There are things I like in yours too that like the design system matches everything. So design system over here doesn't match everything but the hierarchy is phenomenal. Like I'm not even I'm not saying that I made this.

Dr. Zaibis Muñoz-Isme: right.

Ajlan Okman: I did not make this chat made if you give me Figma account I can't make anything like this. But I can tell you if I look at something if it's like what is good in it. So over here uh first of all in terms of hierarchy this enrollment points we are only giving it at the enrollment right so I will suggest instead of like you know having it on the left pane we keep it over here because this is the only place that they can earn these points by gifying it and then

00:25:19

Dr. Zaibis Muñoz-Isme: later in student success. They could gamify again by like register for class, you know.

Ajlan Okman: yeah Maybe you're right actually that may turn into that and then like you know we can relocate or like wherever we can put but right yeah right now we don't have that module

Dr. Zaibis Muñoz-Isme: Yeah. As in Yeah.

Ajlan Okman: and plus like you know admissions which is the next one uh we don't have that either so and then like I I think we decided that we going to remove this and put like the point of contact because the students feel disconnected and They want to have like a clear owner and accountable party that can help them.

Laura Barcellos: I guess it's already there on test on the student All right.

Sait Yucekaya: Yes. Yes.

Ajlan Okman: Yeah.

Sait Yucekaya: This is all ch this side.

Ajlan Okman: Yeah.

Sait Yucekaya: And he's ugly.

Ajlan Okman: Yeah. This is like you know what chat GP gave me. But this is phenomenal like you know I'm in love with it. You see I have like small icon and then do when by how long how many days how long it will take me.

00:26:23

Ajlan Okman: I think this is like you know when they upload something to school system and it basically verifies automatically so they don't have to come and like check it off back over here. I'm not sure if this is needed or if it's too much information right so this is like a backend activity so 100 points today you know uh then they get the gist of linearly decreasing I don't know if I can lie. I will be honest with you. I love this. So I don't know like you know what we are trying to fix. Uh if you want to standardize this more like you know let's say always we use this color and this font for do if it's pass do like you know it becomes red such and

Laura Barcellos: We already have those. I create on the weekend. We have a standardized UX stuff UI also.

Ajlan Okman: okay so then like we can review those two but I think this like this chite if this is more this Yeah,

Laura Barcellos: It's based on it's based on this actually.

00:27:33

Ajlan Okman: whichever like it doesn't matter. What I'm trying to say is like if we sterilize this and take it to the next level, I love it. Like you know, let's just start working on the like, you know, next module. But what I want to make sure is like if we click on this, does it actually work in our system?

Laura Barcellos: That's what we are doing. Actually, this is a s idea of how we can improve our uh UI based on uh we have a lot of things happening on the screen and this kind of bother us a bit, but it's ultimately your guys choice.

Ajlan Okman: I think this like how this washes out animations explains like you know what's the next best move right with this smart order and then the rest to zoom all of these I I I think like this this is what they don't have what we are proposing looks like what they already

Dr. Zaibis Muñoz-Isme: Yeah, checklist already exists in like their whatever current portal or whatever current system or like Ajlansaid in paper that they're sending a dynamic checklist.

00:29:01

Dr. Zaibis Muñoz-Isme: They don't have or like say like you were saying if you did a tour like what's it

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: the the tour on this page something like this too. I think that's nice.

Ajlan Okman: Yeah. So tour definitely I like that on boarding idea on like how we show them or what do they call like tutorial. So I think yeah we definitely Yeah.

Sait Yucekaya: Veryis.

Laura Barcellos: like a tour. It's more like a to

Dr. Zaibis Muñoz-Isme: Yeah. Yeah.

Ajlan Okman: So whatever it is called like you know

Dr. Zaibis Muñoz-Isme: And we have to think not some most times the student when they're going to college, they're going to be sitting with a parent or some somebody over their shoulder to do it.

Ajlan Okman: And like Yeah.

Dr. Zaibis Muñoz-Isme: So like they could do the tour over and over again.

Ajlan Okman: Go ahead. Yeah. And then the other thing is like you know we should tell the story in that tour, right? Uh I like how you you know walk them through on sorting.

00:29:57

Ajlan Okman: So then we explain like you know maybe uh why they need to sort right.

Sait Yucekaya: Okay.

Ajlan Okman: So we will you know show them like the default what's the most important one that will help them to unlock more right and then over here they will see like by due date and such and Sait. So like one one volt through activity can be this and another one can be like uh if they have any involvement problems questions how they do it like they can see how which opens like a stepbystep guide. If this is not enough, I will put like somewhere over here like a Edward icon. Ask Edward. That can be another walk through item that they can ask Edward. If that's still not enough, they can get to contact the person, the point of contact over here and such and such, you know.

Laura Barcellos: Yeah,

Sait Yucekaya: I see.

Laura Barcellos: I guess we are talking about things we already solved like I guess we are in a loop right now.

Sait Yucekaya: Yeah. You know that he's like explaining why he likes this actually, which I get it.

00:31:19

Laura Barcellos: Yeah. No, I got it.

Ajlan Okman: No, I was just declaring what should be like part of the walk through steps,

Sait Yucekaya: Um Yeah.

Ajlan Okman: right?

Sait Yucekaya: Yeah.

Ajlan Okman: So in the walkthroughs when we give a walk through I like the walk through idea different let's add it but let's add it in a way that like tells us story you know so first thing we start with like you know the

Sait Yucekaya: Exactly.

Ajlan Okman: tasks sorting and then showing them like you know uh or if you want first start with the points say like you know you earn points uh when you complete the tasks each point each 100 point worth a dollar or like whatever it is like that conversion rate the points decrease every day uh such and such and then sorting we talk and then how stepbystep directions we talk and then if they have more questions Edward we show them how to use And then if they have even more questions, we show them who is the point of contact, how they can schedule meeting and such and such.

00:32:31

Ajlan Okman: Then that's it. Terms of on board.

Sait Yucekaya: I see. By the way, I need to draw for the United meeting. I will be late for there for two three minutes. So, okay. One last thing that I want to ask like what I'm concerning not concerning but I totally get it is like since uh we're I really like aim is to reduce melt. We need to reduce friction for the student. And what I was imagining is like these students are I don't want to call a bad word but like too less intelligent to complete this part and not normal websites which are like easy or like basic for them. So this is more sophisticated. I totally agree which I like. But I'm like just thinking about hopefully they will also like we'll be able to get it done. And like it's more like I was thinking like Jenzi fights. How can we like make it more Jenzi fight for that one? Uh because I was like

Ajlan Okman: like future product say uh let's put together something that like the VPs will buy right that works that everything is in the right place and then

00:33:44

Sait Yucekaya: I see

Ajlan Okman: uh a UX designer comes in right Victoria Victoria we get bring somebody on board they sit with couple students because we also did like a user test with what's his name Garrick Garrick left this version.

Laura Barcellos: Yeah, he actually help us to word better even like the version we have uh in prod. Yeah, I agree with with five days.

Sait Yucekaya: But Garrick is like intelligent person. But I see I got the point. No worries. Uh so actually I mean we will go whatever which you say what you say. Uh but just I'm just raising concern because I was thinking like because maybe Garrick is like intelligent not maybe he's also I know so he figured out because he's also like in the project but like the you know once you're like solving a problem which dumb people have dumb students have like then you need to think about them because smart people will already get it done but yeah

Ajlan Okman: Sorry.

Sait Yucekaya: you already got the concern so we need to talk about more about

00:34:54

Ajlan Okman: All right. So, let's just stick to this. Uh like we I think should get things that looks like this. we need to what I need your Laura or like whoever can help me to document and come up with design system like you know I don't like overexplaining myself but Laura I know that listen to me I look at what you sent to

Laura Barcellos: I sent to you the design system.

Ajlan Okman: me okay and then if I'm still like explaining that means there is something wrong uh so I need us to do that type of work more and then let's try to solve things that actually what we document as a problem and then of course like you know if you guys have more ideas let's bring them in and such but we cannot go back to step number one you know uh and first I think we need to have like a alignment on

what we are trying to do better what we are trying to do uh what we are trying to solve and then we agree on an approach we agree on a design system or this can be Dr. aritecture technically then we go execute.

00:36:02

Ajlan Okman: So right now my biggest problem is nothing looks alike and then every single time I have to give the same feedback on like oh guys this form field looks like this this address field looks like this there's too much white space like even the spacing over here I love it right so it washes really nice in the eye so like how do we get everybody's agent work the same so this is the solution that I need yella is no longer going to be with Right. She's wrapping up this week and I need like all of this automated.

Sait Yucekaya: Oh,

Laura Barcellos: Right.

Sait Yucekaya: I see.

Laura Barcellos: Yeah,

Ajlan Okman: Okay. So,

Laura Barcellos: I I really need to go and I guess needs to go to the her DSM with like uh United. But one thing just before we go, you said you look what I sent to you Aan but something is missing. I would like to know what.

Ajlan Okman: So we have to jump on a call, right?

Laura Barcellos: Oh,

Ajlan Okman: So I don't do Yeah.

00:37:04

Laura Barcellos: yeah. I just need to

Ajlan Okman: So schedule a meeting. Let's jump on a call. I will review it with you. We will record it. You will fix it. But I need us always in the bridge call, right? Zy, you like, you know, I don't want anybody working as synchronous anymore because I'm not getting where I need to be.

Laura Barcellos: Okay. So, no more synchronous work.

Ajlan Okman: No, like it's not working for a day or two. Everybody can of course say is deployed in a project. So he has his project responsibilities but I'm asking for something maybe I'm not clear right. So sometimes there are like five levels of autonomy that I need from me. So level one is really autocratic. Do as I say. There is no creativity over here. Level two is research and report. Level three is research and recommend. Level four is decide and inform. Level five is act independently. Right?

00:38:11

Ajlan Okman: So sometimes I understand I love that we want to go above and beyond or like that's what our chat GP does gives us the end product but some stuff is like research and report or research and recommend so I see that like that UI task is like I guess research and report and research and recommend like level two and a half per se but when we do stuff you cannot have this much self-confidence and just report that it's done already Right? We have to have reviews and after that make sure that like somebody also peer checks our work cuz most of the time either it comes from YA or anyone else. I'm asking really specific things and with meeting recording still I don't have that type of field that I'm reviewing. So right now I'm losing faith in us like in me getting what I want. So what I want is centralized design system that I previously gave a feedback that's why I need you to review everything on a call with me right and then when we are working you work with Zyis you work with me we have smaller checkpoints so if I don't see folks 8 hours and then a work is delivered that's phenomenal uh that's the dream but then if we always have to have constant feedback loop that I need to see people more frequent in every couple hours

00:39:43

Ajlan Okman: for like a 15 minute of review until everybody learns the lay of the land. This doesn't apply for like you know certain situations for certain folks where they are like subject matter expert. Yes, those take us off deliver. But where we have discover discovery work and it's more like research and report like level two type of tasks there is nothing called done like after that work we have to see align and then create the next level of work and then there is no activity that can take us like you know 8 hour for research and report that's why I need like smaller strokes on meeting together.

Laura Barcellos: We already have three meetings a day. Do you want us to put what time more?

Ajlan Okman: So, let's hang up this call. Let's jump on the next call together. You and I and Zyis can jump on it as well. And we review your design system

Laura Barcellos: I I really need to eat. I I didn't eat anything today from now.

Ajlan Okman: eat. Let's let's regroup in like, you know, 30 minutes or whatever whenever you're done eating. All right. Thank you.

Laura Barcellos: See you.
