Sprint Review - Transcript

00:00:00

Ajlan Okman: over there and then 7:30 below uh morning group over there morning group over there Vivian

Dhairya Shah: Yeah.

Ajlan Okman: Vivian and it says like VH over there for Vivian Hale over here it says Camila so I don't know which user it is yeah

Dhairya Shah: Oh yeah, it's coming. The top top one is written.

Ajlan Okman: so item number one remove the top one

Dhairya Shah: Mhm.

Ajlan Okman: uh so in terms of language item number two nine emails in your brief What does that mean? You know, we need to understand what is that nine. So uh like how we have eight pending response uh then like you know one uh how many 100, how many pending response, how many to follow up. Right? So our logic was what if it's unread important emails

Dhairya Shah: Mhm.

Ajlan Okman: unread important uh pending response emails unread uh pardon sent but haven't received any response back right so those were like the three things that we were looking for if I recall correct so that all like nine number needs to be aggregate of

00:01:18

Dhairya Shah: Mhm.

Ajlan Okman: that and see like you know uh nine emails in your brief and if you can like you know break it down to explain over there where you say like eight pending response so nine meetings today four important meetings that's a good one nine waiting on you nine tasks I guess yeah so choose Doesn't make sense.

Dhairya Shah: Yeah.

Ajlan Okman: Or high priority open cues. Okay, this is good.

Dr. Zaibis Muñoz-Isme: for the institutional intelligence. This is going to be based on like operational workflows that the school is giving us, right? Like their their levers,

Dhairya Shah: Yep.

Dr. Zaibis Muñoz-Isme: their like Aan says, ontology of what they're looking for.

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: Okay.

Laura Barcellos: Beyond that in their data this is an apper that we're going to call intelligence

Dr. Zaibis Muñoz-Isme: Right.

Ajlan Okman: Yeah.

Laura Barcellos: layer that will exist like transversially in the whole application.

Dr. Zaibis Muñoz-Isme: Yeah. Yeah.

Ajlan Okman: Zis, you know how they were teaching us like displacement graph?

Dr. Zaibis Muñoz-Isme: Mhm.

Ajlan Okman: uh or like you know the distance graph.

00:02:50

Ajlan Okman: So distance,

Dr. Zaibis Muñoz-Isme: Yeah. Yeah.

Ajlan Okman: velocity and acceleration right? So they were like all related. So over here at the institutional pulse we are looking at the delta so to

Dr. Zaibis Muñoz-Isme: Yes.

Ajlan Okman: understand if we are going to hit our goal or not if we're going to match it uh

Dr. Zaibis Muñoz-Isme: Mhm.

Ajlan Okman: or like lose it but at the institutional intelligence we are looking at delta delta right so

Dr. Zaibis Muñoz-Isme: Yeah.

Ajlan Okman: how fast we are getting where we need to be and which what is alarming how how long are we spending in each stage is it like less than the SLA that allows that they set as goals So institution sets the goals in the workflow. Institution set the goal in the numbers and then we show those goals at the institutional pulse and then we ring up the concerns on how fast uh things are

Dr. Zaibis Muñoz-Isme: Yeah, every everybody so far has loved that part,

Ajlan Okman: changing.

Dr. Zaibis Muñoz-Isme: but senior leaders I think love it more,

00:03:47

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: right? Like the director is not going to love it as

Ajlan Okman: Correct. Yeah. uh and like you know we can turn on turn off that feature like they can do it uh within like their team right so that's the idea about it if they think it's not useful for the director level they don't want to see it every morning they can turn it

Laura Barcellos: Make it change. Yeah, make

Ajlan Okman: off uh one second I think my mom is here particular. Okay, we have one to two minutes until I have to go downstairs and pick her up. Okay.

Laura Barcellos: Okay.

Ajlan Okman: Uh what's what's next? We

Laura Barcellos: Institutional first the card on the institutional intelligence makes sense to you like how it's not written specifically but how it looks that's what we

Ajlan Okman: I think how it looks is fine.

Laura Barcellos: want.

Ajlan Okman: It's just I think too spaced out like so uh for example commuter student uh deposit pace is slowing what is it like slowing down so I think you guys need to come up with these uh and like do like a kind of UX copy

00:05:03

Laura Barcellos: Oh yeah.

Ajlan Okman: writing so these may not be

Laura Barcellos: Yeah. But the thing is uh this is the intelligence layer.

Dr. Zaibis Muñoz-Isme: But I think there.

Laura Barcellos: It's it it's not going to be us. We need to teach teach the module to write properly.

Ajlan Okman: I don't think this is coming from intelligence automatically. Right? So I think you guys just handwritten these

Laura Barcellos: No, no. Yeah, this one. Yes. That's why it's written like this because this is something that we are not going to do.

Ajlan Okman: Laura that's why just listen to me right uh this one that I'm looking at that Z is going to

Dr. Zaibis Muñoz-Isme: Let's move.

Ajlan Okman: present since it's not working and it's like a demo one needs to be worked out so take a note of it

Laura Barcellos: Mhm.

Ajlan Okman: that you have to work with Z it's not Yeah.

Dr. Zaibis Muñoz-Isme: Yeah, because I want to see like what do we want? What do we where do we want the eye to go first?

00:05:42

Dr. Zaibis Muñoz-Isme: Right. If I'm like what is the most important piece?

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: I think the money shot like Ajlansays is the \$1.6 million negative 82 students. The I is going to go there first. But should we be making the commuter student deposit pace is slowing is the is the headline like what's the headline?

Ajlan Okman: I I agreed. So over here I think that taxonomy is not clear like so my eye directly goes to the

Dr. Zaibis Muñoz-Isme: They're red.

Ajlan Okman: uh the red stuff and then there is no like a hierarchy right so there there needs to beally something like H1 H2 H3s of the world uh I like how you guys did it with the application right my I directly goes to the big numbers that I'm tracking and I get to understand what is it at the applications because there is like a little tag and then I see like the changes and such So over here I think this UX design of this is going to put us to choke hole.

00:06:38

Ajlan Okman: So what I will suggest is this. Don't make D make change anything. First sit together with Z and understand uh you both decide like how the insight needs to look and like come up with some sexy insights. Committed student deposit pace is slowing down compared to residential students. Right? So that's a full insight cause slowing down against what right? So you guys need to come up with like a ontology for this to understand like what are

Laura Barcellos: Mhm.

Ajlan Okman: you complaining against what it doesn't have to work just make it sound smart. Then after that gray area that you have is again so spaced out. So that's going to be your like backing. So over there you're going to talk with numbers your deposit rate

compared to last year and this this year uh when we compare this this that that decrease this much which may jeopardise your like you know uh which may increase your

Laura Barcellos: your whatever. Go

Ajlan Okman: yeah which which may increase your commuter student melt and then put the potential impact right how much money how much students good and then recommended actions needs to be like a little bit more elaborate launch targeted outreach blah blah high possibility students with incomplete financial aid.

00:08:01

Ajlan Okman: So over here tie them like you know uh launch uh we see that financial aid is the largest blocker in the blocker in this cohort of uh such and such students. Uh launching a targeted campaign for this number of students to mitigate their financial aid uh may help to uh reassure their commitment which will uh possibly improve your uh possible melt by 5%. Right? So we have to give them like some agentic action that they have to do for

Dr. Zaibis Muñoz-Isme: Yeah.

Ajlan Okman: a specific cohort. make the intelligences look like this. Then we understand how what's the length count for a approximate description, approximate action. Then we give this to Daria and say, "Daria, look this uh language and then look at this uh what do you call that like the UX design guideline yeah they come up with something do I really like that

Laura Barcellos: Del. The looks

Ajlan Okman: like purple background I don't but right now we are not in that phase to negotiate on that because

Dr. Zaibis Muñoz-Isme: Yeah, we have to assume Yeah,

00:09:15

Ajlan Okman: the language is terrible Yeah.

Dr. Zaibis Muñoz-Isme: we have to assume everybody we are going to be working with is dumb. Everyone who works in higher ed is not smart on the administrator side. They don't know how to make these insights by themselves.

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: So when I'm showing this product today in my call they were like Zitus you melted our brains like our brains are melted that these things are possible. So that alone is a huge selling factor. The fact that we're we're creating the intelligence piece it comes both in but you have to appeal to like different learning styles. The numerical learning style of seeing the numbers and being able to replicate that story and also the language like how do we explain what these numbers are about?

Laura Barcellos: Okay. Okay. So, I will I will just put some time with you, Zie, so we can talk about it.

Dr. Zaibis Muñoz-Isme: Yes, for sure.

Laura Barcellos: Uh, institutional post, we went over this over and over.

00:10:12

Laura Barcellos: I guess it's quite reffinated and good to go.

Ajlan Okman: I think this is good to go. Z is any

Dr. Zaibis Muñoz-Isme: No, I like it a lot. I think the everyone's always blown away with this too because uh asking Edward a question specifically about that and not having to input the the information that's a really good feature.

Ajlan Okman: which doesn't work at the moment I think but it's a good system.

Dr. Zaibis Muñoz-Isme: I know it doesn't work at the moment,

Dhairya Shah: Oh, it's no it's it's going to work soon.

Dr. Zaibis Muñoz-Isme: but I know I usually

Dhairya Shah: Pretty soon because overall it is uh by the way Dr.

Laura Barcellos: I don't know.

Dhairya Shah: Z did you uh

Dr. Zaibis Muñoz-Isme: just I usually I click on it and I show them, but I don't ask Edward a question.

Dhairya Shah: oh did you uh today did you ask any question to Edward in the demo or no?

Dr. Zaibis Muñoz-Isme: I did and the student portal though and the student on the enrollment side which that was the feature they fell in love

00:10:52

Dhairya Shah: Okay.

Dr. Zaibis Muñoz-Isme: with the most. So hopefully we can start a use case with them for that.

Dhairya Shah: Okay. Awesome. Uh yeah,

Ajlan Okman: Thank you.

Dhairya Shah: Edward is pretty good.

Laura Barcellos: Okay.

Dhairya Shah: I'm going to connect all of this to Edward, by the way,

Ajlan Okman: That's Chris.

Dhairya Shah: uh soon enough.

Laura Barcellos: And now we have calendar,

Dhairya Shah: Yeah.

Laura Barcellos: email and action center. So can you choose one in the calendar n for us?

Dhairya Shah: Uh yeah.

Laura Barcellos: And then this is

Dhairya Shah: Yeah. This is not the most refined stuff, but yeah. Uh this is based on yellow thing.

Laura Barcellos: yeah this is yeah this is based on ya maybe we need some more refinement here uh we can talk in the same meeting Dr. is how we make it better. Um, but being honest, this is not my major concern right now.

Dr. Zaibis Muñoz-Isme: No, I think this is a later a later problem. I feel like as soon as we get our first client and they give us some direct user feedback, we can we can do that.

00:11:53

Dr. Zaibis Muñoz-Isme: Especially if FIU is going to be that client. I you know we can do sandbox

Laura Barcellos: Yeah. Yeah, I don't think we need like okay of course we can improve how we show the emails, how we show the calendar and how we show the action center or morning brew. I'm pretty sure we can but I think having for example the whole enrollment experience done is uh has a like a big yeah it's a bigger

Dr. Zaibis Muñoz-Isme: better. Yeah.

Laura Barcellos: it's more important.

Dr. Zaibis Muñoz-Isme: Correct.

Laura Barcellos: Uh can I see an email Dhairyaplease?

Dhairya Shah: Yep.

Laura Barcellos: Not not the kind of nerf the mail safeguard please. Yeah.

Dhairya Shah: So on the left it is uh on the left side it is what uh you see on Gmail what they sent without any changes and on the right is what uh Edward prepared a draft for you which you can send directly from here or if you want to change the draft you can say uh make it concise or something like that

00:12:50

Dr. Zaibis Muñoz-Isme: Mhm.

Dhairya Shah: right and then uh Edward's going to update the draft and then you can send directly

Laura Barcellos: And Once it's connected,

Dhairya Shah: once once your Yeah.

Laura Barcellos: you can send from morning brew. You can reply your emails and do stuff from here.

Dhairya Shah: Yeah.

Laura Barcellos: And for the action center, uh it's like very very uh simple UX that we had and well

Dhairya Shah: So yeah. So the plan with this is that uh all of this is

Ajlan Okman: with the

Laura Barcellos: Ajlanyou are the cut scene.

Ajlan Okman: one sec. Okay.

Laura Barcellos: I guess you are on the elevator or something.

Ajlan Okman: Can you guys Yes. Can you guys go to the uh the email? Uh yeah over here like you know I like say what what to change but maybe uh over there like when you start typing it's really close that like arrow is to the send reply button. So maybe we do that like facing up and then like make it more purple when you're typing.

00:14:03

Ajlan Okman: So this way it can be more distinct. So actually this came from a user experience designer as a feedback and I was showing her our product.

Laura Barcellos: I will do this.

Dhairya Shah: Oh,

Laura Barcellos: She I I will do this for of course I will send a reply instead of changing stuff easily.

Dr. Zaibis Muñoz-Isme: I think that the email the email feature is cool, but I feel like it as you are

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: I think as you're going through your emails when I'm looking at my emails and somebody asked me a question and maybe wants to have a meeting. The only problem I see is you're not going to be able to toggle between your email and your calendar. You know what I mean? like something to think about cuz like let's say I got an email and was like, "Hey, Sies, you know, I want to have a meeting with you next week to talk about uh the the morning brew data report that we got today. I'm concerned about commuter blah blah blah.

00:15:07

Dr. Zaibis Muñoz-Isme: Can we make a meeting? How do I toggle between this and my calendar? You know, like I live in my calendar like could could we

Laura Barcellos: Yeah.

Dhairya Shah: Oh yeah.

Laura Barcellos: Okay.

Dhairya Shah: So

Laura Barcellos: I will think about something.

Dr. Zaibis Muñoz-Isme: connect could we connect calendar on like the right so it's like a three panel

Laura Barcellos: Yeah, we can.

Dr. Zaibis Muñoz-Isme: system.

Dhairya Shah: Oh yeah.

Laura Barcellos: We can maybe or just make it bigger down there. I will think about something. Yeah, the same. I thought the same.

Ajlan Okman: on this in this in this

Laura Barcellos: Yeah,

Dr. Zaibis Muñoz-Isme: Yeah,

Laura Barcellos: there and then open.

Ajlan Okman: box.

Laura Barcellos: No,

Dr. Zaibis Muñoz-Isme: I was saying Aan like if Yeah,

Laura Barcellos: we open popup.

Dr. Zaibis Muñoz-Isme: like if I get an email about to schedule a meeting, if I get an email to schedule a meeting, how do I move from here to my calendar?

Ajlan Okman: Oh

Dr. Zaibis Muñoz-Isme: Like I have to close this box to get to my calendar or guess what I'm going to do?

00:15:51

Ajlan Okman: yes.

Dr. Zaibis Muñoz-Isme: I'm going to leave and I'm going to go to Outlook.

Ajlan Okman: Yes. So that that's good. So I will suggest like instead of putting it up, put it below where it says like send reply. So if this is like a aentic action that we detect somebody is asking for a meeting so you

Dr. Zaibis Muñoz-Isme: or or related content.

Ajlan Okman: can

Dr. Zaibis Muñoz-Isme: What's in the related content? Scroll down.

Laura Barcellos: Yeah,

Ajlan Okman: yes if there's

Laura Barcellos: you have everything regarding this email that we we take from

Dr. Zaibis Muñoz-Isme: Oh, I like that.

Laura Barcellos: the

Ajlan Okman: a previous calendar or if there is like something attached in this email attached is left and

Dr. Zaibis Muñoz-Isme: Yeah.

Ajlan Okman: then on the right we bring you like whatever else is over there. So over here I think the user experience needs to improve too. So it says like we found a leadership huddle but I don't see what day what time is that. I just see that beautiful uh picture which is user.

00:16:40

Dr. Zaibis Muñoz-Isme: Thanks.

Ajlan Okman: So it should tell me when was the last time is it reoccurring one time when what's the next time right if you find a

Dr. Zaibis Muñoz-Isme: Yeah, it has to have some like a calendaring feature because for me like we're assuming that a

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: senior leader is looking at this, their meetings are back to back to back.

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: So like if I'm if I'm here because it's it's convenient for me to be in here, I don't want to have to leave or close this. I made a draft of my email. I don't want to close it to then lose my draft or like how do we show them a clearer picture?

Ajlan Okman: Okay. So,

Laura Barcellos: and and and this is important.

Ajlan Okman: we we have to we have to chunk this use case because this is too big of a problem to solve.

Dr. Zaibis Muñoz-Isme: Yeah, I know.

Ajlan Okman: So first is uh what we need to do uh at the elsewhere in your work right attachments is easy cuz you see like whatever is over there you just bring it in elsewhere in your work is where we dig their calendar where we dig their email where we dig like their drive right so if it's a email I don't like that look if it's a calendar I don't

like that look right so you got to bring the emails title when it was sent and the summary of it.

00:17:53

Ajlan Okman: If it's calendar,

Dr. Zaibis Muñoz-Isme: Also,

Ajlan Okman: same thing.

Dr. Zaibis Muñoz-Isme: who else is in the who's else is in the email? Is it more people than just the sender like who's copied who's copied in

Ajlan Okman: Yeah, exactly. Right. So, basically,

Dr. Zaibis Muñoz-Isme: the

Ajlan Okman: same thing with the calendar. Who were the attendees? Like come up with like a uh Yeah.

Dhairya Shah: on calendar. You can see this

Laura Barcellos: Yeah.

Ajlan Okman: But if you if you go back to the email and you found something, so don't see this as a calendar exercise. See this as so forget about the first conversation that we have. So, this is the root cause that we have to solve. I'm going to get to the conversation that we're having right now. So our main problem, the root cause problem that we first have to solve is the related content we are bringing in. Can you scroll down?

Dhairya Shah: Uh, yes.

Ajlan Okman: Yeah. So let's take a pause on the previous direction.

00:18:41

Ajlan Okman: So the problem over here is the related content we are bringing in is not clear. So as a executive I cannot see and when I met with this person last who is trying to schedule a meeting with me or what was my last email accommodation which you guys have it over here you you are considering that but this is not like selfexplanatory and it's not elaborating so I don't know what happens when I click on the cal you click can we click on this on the cal like Uh on the right side. Right. Right. Yeah. Yep. Up. Up. Little bit. Up. Yeah. No. No. Not that one. Yeah. That one. For example, click on that. Dhairya,why can't we click? Can you click? Is it clickable or not clickable?

Dhairya Shah: No, no,

Ajlan Okman: Yeah,

Dhairya Shah: no.

Ajlan Okman: that one.

Dhairya Shah: This this will just show a sample uh text here.

Ajlan Okman: Yeah.

00:19:34

Ajlan Okman: Yeah. Yeah. So, basically like those they need to be more insightful. If you found something else, it needs to have like what was that conversation, right? a summary something that we found or if it doesn't show at least show the time subject body of the calendar and email and as I said like CC to attendees and that type of stuff if it's past you know the date and time how often that happens if it's related to this something like that okay so now that's problem number one problem number two let's scroll we need to do like a intent segmentation. So uh if they're asking for a meeting we need to add a feature like that how ZV says that we need to find a meeting time. So in Outlook they have algorithm for this. It says like suggested meeting time. If I put somebody's name and my name based on looking both of our calendars together. So how we have like say what to change right above that. One sec. Uh so right above that make a suggestion.

00:20:58

Ajlan Okman: box like how how we have like these like toasts in Laura's UX guideline like a little flag that says uh meeting request detected uh proposed meeting time this this that that based on both of your schedules and then when they say add instead of saying what to change they should be able to uh we should be able to regenerate that email add the suggested meeting time. Okay, so two actions in this ask is one to add as a proposed time two to create a calendar invite. Does it make sense? But for this to happen educatedly, right, our suggestion probably will be also based on what they spoke about last time. So maybe uh like they they don't need a meeting, they can just use the next DSM. Does it make sense? So let's see like what are the meetings, what are the email conversations they had regarding this situation. So we have to I think first fix below and learn what are the outcomes we learn from there and then see if we can fine-tune the model to give us the correct uh flagging over here or the UI perspective you can both work at the same time but I think from the model training perspective if you don't know what's happening down there we won't be able to get good agentic action over here do I make it sense or did I lose you guys?

00:22:47

Laura Barcellos: No, no, you don't. You do. And uh I will write this feature because what Zaibisbrought is pretty important and I think we can do better.

Ajlan Okman: Yeah. So Laura, again before any UI changes and before we consume anything from Dhairya, I need you to take a stab at it. Explain that feature in writing, pass it through Zy. Zyus gives thumbs up and then you create the story and then if they need to create the task regarding like this how we can enable the back end and such tech leads can do that but I want all the stories tested by you created by you epics created by you tested by me and then tasks created by engineers and tested by Saitright as the technical lead I'm just

Laura Barcellos: I guess that's that's the the flow already. I guess that's No,

Ajlan Okman: like you vocalizing it again.

Laura Barcellos: I'm I'm just thinking.

Ajlan Okman: Okay,

Laura Barcellos: Yeah, I think that's how we are doing today. Good.

Ajlan Okman: one second. Uh, client texting.

00:23:50

Ajlan Okman: Uh, yeah, tell me what's the next one that we are reviewing.

Laura Barcellos: Do we have anything else to review here on morning broad? I don't I don't think so.

Ajlan Okman: Okay, can we go back to calendar?

Laura Barcellos: I guess not.

Ajlan Okman: Let me see the calendar really quick.

Laura Barcellos: Sure.

Ajlan Okman: Okay. So over here I will suggest you put like a thumbs up thumbs down because you have a prep sheet. So make them rank if the prep was useful or not useful.

Laura Barcellos: Take a lot of

Ajlan Okman: And then if they thumbs up uh have like a quick check boxes that says uh yeah yeah like you know I

Laura Barcellos: white.

Dr. Zaibis Muñoz-Isme: What's

Ajlan Okman: liked how coincid this. I like the background information like come up with like four items if they like. If they don't want to respond and skip,

Dr. Zaibis Muñoz-Isme: what's

Ajlan Okman: they can skip.

Dhairya Shah: Yeah,

Ajlan Okman: But after like if they have two seconds and then do the same for

Dhairya Shah: similar to similar to Edwards,

00:24:43

Ajlan Okman: dislike.

Dhairya Shah: right? Yeah.

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: Yeah,

Ajlan Okman: Yeah. So if you click the thumbs up,

Laura Barcellos: Yeah.

Ajlan Okman: what does it say?

Dhairya Shah: Uh,

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: bad.

Ajlan Okman: Yeah.

Dhairya Shah: it's going to it's going to go to us like I I see the stuff in the back end.

Ajlan Okman: Yeah. But nobody's going to give you free text input. So give them free text option too. But give me check boxes. That's what we did at United and we get huge success with that.

Dhairya Shah: Oh yeah. Oh no.

Laura Barcellos: Yeah,

Dhairya Shah: You could by the way directly directly post.

Laura Barcellos: that's the better way.

Dhairya Shah: For example, if you just want to do thumbs up, you can just thumbs up.

Ajlan Okman: I know. But after thumbs up, I want a quick popup that comes up.

Dhairya Shah: Oh, okay.

Ajlan Okman: What did you like the most?

Laura Barcellos: That's four.

Ajlan Okman: And then like four check boxes that I can say it was precise, so accurate.

00:25:17

Ajlan Okman: I love the design. I don't know whatever like the four categories I forgot. And then three text and then submit. But they don't have to submit. They can just skip as well.

Laura Barcellos: I have benchmark for it.

Dhairya Shah: Okay.

Laura Barcellos: A beautiful one of a uh app that delivers food.

Dr. Zaibis Muñoz-Isme: Go back to go back to calendar.

Laura Barcellos: Go ahead.

Dr. Zaibis Muñoz-Isme: What's in the related content of the calendar when you scroll down you know

Laura Barcellos: Same. the same. Everything we follow

Dr. Zaibis Muñoz-Isme: for the main difference for calendar just because my brain I need to see a month like can I see a month view in related somewhere you know like this is the calendar popup but like is is Tuesday the 16th or the 17th because then I'm going to look at my phone or again I'm going to go to Outlook or to Gmail

Ajlan Okman: Uh yeah, but this is your daily view, right? So maybe we can do that in somewhere else in other future.

00:26:07

Laura Barcellos: Yeah,

Ajlan Okman: But at morning group,

Laura Barcellos: but this is for the day. What you have today?

Ajlan Okman: yeah,

Dr. Zaibis Muñoz-Isme: Okay. Okay.

Laura Barcellos: So this is we're meeting today.

Ajlan Okman: it's going to be

Laura Barcellos: You have this meeting.

Dr. Zaibis Muñoz-Isme: that.

Laura Barcellos: This is your prep. This is what we found as related context. I think we may have like this thing down here. Okay. Uh another one uh for the look say are we ready to show the the 360

Sait Yucekaya: I know unfortunately it is like still coding to be honest like uh it's not completed yet.

Laura Barcellos: okay

Sait Yucekaya: So some components are there but it's not fully uh done. So let's not waste time on it.

Dhairya Shah: How about how about 360 over here which which Yala made the UI

Laura Barcellos: no so I will I will ask then we go to enrollment because of the sprint goal so Please open the student portal. Let's share uh my enrollment um appointments, my degree, my wellness and how housing financials and campus life.

00:27:08

Laura Barcellos: Let's see whatever we can see with this amount of time we have. So as let's start with my financial that I guess that is one of the biggest thing we are showing for now. That's it right. So da please let's show my financials. I can share here if you guys rather.

Ajlan Okman: So, how did we jump over here? And why we skipped the last uh part of more number?

Laura Barcellos: Oh the higher ed news.

Ajlan Okman: Yeah.

Laura Barcellos: I'm sorry I forgot.

Ajlan Okman: Yeah. Yeah. Laura, you're like a like pre-owned car salesman. You're trying to hide stuff from me.

Laura Barcellos: I'm not it's just it's just the pictures. That's all.

Ajlan Okman: Okay. So, the pictures don't work. And then what about the insights over here? I don't see the example of insights. Can you go to customization and add insights for me? Think we spoke about adding over here uh the hooking up the emails like the connectors, right?

00:28:05

Ajlan Okman: So, if they select email on calendar on Yeah.

Dhairya Shah: Oh yeah. Uh it's it's in my Yeah, I'll show that soon.

Ajlan Okman: Yep.

Dhairya Shah: Uh just in a minute.

Ajlan Okman: Yeah, that sounds good.

Laura Barcellos: Yeah.

Ajlan Okman: That's fine.

Dhairya Shah: It's not.

Laura Barcellos: So let's we need testra with the newest newest version. I really don't want anything in our machines like that.

Dhairya Shah: Yeah.

Laura Barcellos: We can't present

Dhairya Shah: If you push uh Yeah.

Ajlan Okman: Okay, let's scroll down. Mhm.

Dhairya Shah: If you

Ajlan Okman: Okay, so let me just read a deposits are running 11 days later than I so let's take a note of this. Uh so first I think these articles are really old so how can we make this like a real time pipeline that we can bring the latest and greatest all the time

Laura Barcellos: Mhm. Okay.

Dhairya Shah: Yeah.

Ajlan Okman: so that's I think not working so that's a test to fix once this is fixed uh a story for Laura and Zes is to understand what's the latest news that came up and train like a prompt or something like that to be able to give us the responses.

00:29:15

Ajlan Okman: So what I would have done is I would have first read that get the summaries have a quick textual conversation with chat and then get the insight I want and reverse engineer and say like what will be a great prompt to generate insight like this and what will be the framework for that and then give that back to Daria and then Daria can play around and see how we can do that but this is such

Laura Barcellos: Okay.

Ajlan Okman: a great idea that the language doesn't click but I can't have you guys do this for each inside it has to be a real time pipeline.

Laura Barcellos: Mhm.

Ajlan Okman: So that's why first it goes to direct to make this real time and then Laura to work with Zy to

Laura Barcellos: I will do it.

Ajlan Okman: get the insights examples for the selected articles as well as the MD file for the

Laura Barcellos: Mhm.

Ajlan Okman: logic of writing those.

Laura Barcellos: Okay.

Ajlan Okman: All right,

Laura Barcellos: Okay.

Ajlan Okman: that will go back there.

Laura Barcellos: Uh do we have any effect that we want to see here like regarding the how my university

00:30:12

Ajlan Okman: So that's why like the first test goes to Yes, exactly. So that's why the first test goes to Dhairyato actualize this in real time pipeline to see what are the latest news we get. So then you guys do like a exercise on how that relates to my numbers. So I'm just saying something like this. Uh the news says that enrollment is up in US institutions 10%.

Laura Barcellos: But mine isn't

Ajlan Okman: Uh and then yeah mine isn't. So Aster knows that mine isn't. So now I need to see like I need to give them insight about that right. Uh they like anything around those lines. I don't know. Zy is more knowledgeable and so you guys hash it out together. But again, I don't want to double double down on the hours, right? So, Daria works on real time integration.

Laura Barcellos: Don't worry. Don't worry.

Ajlan Okman: There's I'm done and then you work on the editorial logic editorial first with the five use case examples you guys picked together.

00:31:18

Ajlan Okman: Then you are done with that. We approve. We say okay exactly this is how I want the insights. And Z says exactly this is how I want the insights. Then the third one is what will be the instructions to be able to

Laura Barcellos: the skill. Yes,

Ajlan Okman: exact.

Laura Barcellos: the skill file.

Ajlan Okman: So, three tests.

Laura Barcellos: Okay, wrote it down.

Dhairya Shah: Yeah, this is the email and stuff connectors. You can connect your email. The the intelligence part is is since we don't have it's not going to show up insights and all that, but going to read the emails.

Ajlan Okman: Yeah, like you know whatever like maybe we can even give them like incorrect numbers for now just provisional uh just for the demo. Oodentra. All right,

Laura Barcellos: How is there in the world?

Dhairya Shah: Yeah.

Ajlan Okman: let's go to the next one.

Dhairya Shah: Yeah. Okay. Yeah. These are the actual email and calendar connections.

Ajlan Okman: Okay. Nice, nice, nice.

00:32:28

Ajlan Okman: What else?

Laura Barcellos: Guys,

Dhairya Shah: I think

Laura Barcellos: please uh we need go to the student portal.

Ajlan Okman: Okay. Go go go to the ser port. But are we good like with the updates, edits, meet meeting minutes up to here?

Laura Barcellos: Oh yeah. Yeah, I have it. I'm I'm writing.

Ajlan Okman: Okay.

Laura Barcellos: It's all good. So,

Ajlan Okman: All right.

Laura Barcellos: uh I will start with my financials here because is what Dr. Zaibisis uh showcasing the most. So let's approve this and let it

Ajlan Okman: Z, is that correct? We don't show like my enrollment.

Laura Barcellos: No,

Ajlan Okman: We are more interested in fly.

Laura Barcellos: we shall like my finish.

Ajlan Okman: I asked a question to Z. There's a reason I started sentences with Zy. Is that correct?

Laura Barcellos: Go ahead, Dr.

Ajlan Okman: How many coffee did you have today? You're all good.

Dr. Zaibis Muñoz-Isme: Yeah, my financials is like the hot seller right now. I think people like it because I don't think any institution is showing it.

00:33:30

Dr. Zaibis Muñoz-Isme: Hi, how are you?

Ajlan Okman: Okay. So then let's start with that. Laura is right.

Laura Barcellos: Yeah, I know. I'm right. I'm on top of the product. You need to trust me.

Ajlan Okman: I trust him. Trust and verify. That's the Turkish way of doing things.

Laura Barcellos: Go ahead. So, uh, this is the looks, right? The first looks.

Ajlan Okman: All right. So,

Laura Barcellos: What do you think?

Ajlan Okman: let's do one by one. Sometimes I feel like uh what was that like? Nikki Glazier, Kevin Hart roasting session. Uh they had like they were roasting uh each other. So let's take a look.

Laura Barcellos: Yeah. Wait,

Ajlan Okman: Do I know what to account?

Laura Barcellos: I guess you feel the same.

Ajlan Okman: Yeah. Uh uncover balance. All right. So how can we estimate?

Laura Barcellos: What part are you?

Ajlan Okman: So it says like 4400 estimate. No, it's not a redundance.

00:34:30

Ajlan Okman: I think that is going to be changing all the time, right? That's should be pretty solid. It's not an estimate, right?

Dhairya Shah: It's about the anticipated you might get

Ajlan Okman: I see. Okay. All right. So, let's think about that. Let's open like a quick note, Laura, for us to go back to that. But the second point is that Immani Blackwood looks terrible. Your financial aid contact. Okay. Of course, that person is going to work at financial aid office, right? So, that's a useless information. It should be their title. So, I don't know. Uh,

Dhairya Shah: Yeah.

Ajlan Okman: aid specialist three. They have like fancy titles like that. And then right below you should have like contact information as phone number, email and thing like that. So it needs to be I think like a three thing. Can we stop showing me Edward? I know it works great. It's waste of time at this point.

00:35:22

Dhairya Shah: Okay. So

Ajlan Okman: Like I'm serious but that there is a reason why I'm not buying those credits because you're going to just go to town and make the better Edward while the rest of the product is not working well.

Dhairya Shah: yeah. Oh no. If you Okay.

Ajlan Okman: Okay. So stop Edward.

Dhairya Shah: All right.

Ajlan Okman: Let's focus on the UX. Anything that we can do with UX then you can do it with Edward.

Dhairya Shah: All right.

Ajlan Okman: I love it. But if I cannot do it with UX by clicking because these people are 65 year old it's worthless to

Dhairya Shah: Mhm.

Ajlan Okman: me.

Dhairya Shah: Yeah.

Ajlan Okman: So then uh make it like a threeline thing. Put me the contact information below and then I want a real picture. I don't want like a get AI generated head shot

Laura Barcellos: I will I will have we have a a whole website that doesn't persons does not that

Ajlan Okman: whatever. Yeah. Like Laura,

00:36:00

Laura Barcellos: exists

Ajlan Okman: you got that. Uh just take a note of it. What is that E over there? He is Edward. He is email. I have no clue.

Dhairya Shah: Dead work.

Laura Barcellos: They said,

Ajlan Okman: Well, why? Why Edward? What? What is Edward gonna do? Like send a flowers to Immani's home?

Dhairya Shah: I mean,

Ajlan Okman: Uh,

Dhairya Shah: if you want to if you want if you want to maybe make an appointment through Edward, you can do it today.

Ajlan Okman: exactly. So, no, don't make an appointment to Edward. Make an appointment through like a appointments page. either put like a meeting invite that schedules a meeting with them, brings them to the appointment page for that person or put a email icon, right, that sends them an email like takes it to their Gmail or whatever like the email server or copies the email or call that calls them. I don't think we can call them right over here like two actions we can take.

00:36:53

Ajlan Okman: We can email them. So it can be like a mail to link and then we can take them to our portal to request a message uh request a meeting with them right because we have everybody's calendar is this clear do we have any this is such a simple change

Laura Barcellos: No,

Ajlan Okman: I'm just giving you guys heads up if we can't deliver this such a small component I will really get

Laura Barcellos: no,

Ajlan Okman: upset okay all right so I like your

Laura Barcellos: we can. Don't worry. We can do it.

Ajlan Okman: purple over there 28 decisions waiting review your office offers and payment plan. So that's a smart insight. All right. Uh I like that. Okay. Scroll down. Cost of attendance in your committed changes alongside loans. I like that. So tuition full semester mandatory fees full semester housing unlimited meals. I don't think there is something called unlimited meals. So get like a better language on that with zy.

Dr. Zaibis Muñoz-Isme: Yeah, it'll have a they'll be able to choose a specific meal plan.

00:38:00

Ajlan Okman: Yeah. Yeah. So it will be like 10 mil plan per week or something like that. And then the housing like be more specific. Put like you know double room uh

Laura Barcellos: And we're on the bathroom

Ajlan Okman: fall semester. Yeah. Whatever. like you don't have to go to town like I don't need a full name but I need something like more specific and you can have like housing

Dr. Zaibis Muñoz-Isme: Careful.

Ajlan Okman: dash that cuz all of this is of course going to be for fall semester right so there's redundancy so you can have like housing dash what they chose meal plan dash what they chose tuition dash full-time uh fall semester full-time enrollment or fall 2026 full-time enrollment or like just call full-time enrollment, right? Cuz it's different for part-time versus full-time health insurance. Uh so you can say like insurance dash health, you know, insurance dash tuition because there are different type of insuranceances. So try to see if you can come up with like a more way of doing this.

00:39:16

Ajlan Okman: Oh, so cute. You guys like the onesies? Danielle is texting me.

Laura Barcellos: Therefore,

Ajlan Okman: All systems go. It's so funny. She takes me from Slack first. If I don't respond, text me from like uh cell phone. If I don't respond.

Dr. Zaibis Muñoz-Isme: We We know that's how we find That's how we find you.

Ajlan Okman: So this is I think good way to start.

Laura Barcellos: We are we are along the text.

Ajlan Okman: But what I want you guys to do is like select maybe like I don't know category name or something like that. So it's really hard to differentiate UX wise which color is what. So can you hover on the tuition? So Dhairyauised to have like a animation that if you hover on the wheel versus if you hover on the thing it was like highlighting each other. Can you hover on the wheel?

Dhairy Shah: Yeah, it's not working. It's like not horrible.

Ajlan Okman: Yeah. So let's fix that. Yeah.

00:40:17

Ajlan Okman: So when I hover on I need to see like where is that?

Dr. Zaibis Muñoz-Isme: And Lara,

Dhairya Shah: Yeah.

Ajlan Okman: And then when I h No,

Dr. Zaibis Muñoz-Isme: we have to go ahead.

Ajlan Okman: no, please finish.

Dr. Zaibis Muñoz-Isme: I was going to say the other thing that I noticed today when I was doing demo is when we click on details, what does it say?

Dhairya Shah: It's It's not much.

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: Right.

Ajlan Okman: So did Yeah.

Dr. Zaibis Muñoz-Isme: So we and I I mentioned today in the in the demo I was like hey you know when we mention details

Ajlan Okman: Go ahead.

Dr. Zaibis Muñoz-Isme: what we're hoping is that the descriptions that the school is providing to us of

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: that will live there.

Ajlan Okman: Correct. And I want it in a drawer format.

Dhairya Shah: Mhm.

Ajlan Okman: So and every time I click on a detail, I think we should either open a popup page or drawer. you guys decide but I like drawers more. But then it basically shows us like how the tuition is calculated right for example instead of saying like full-time blah blah we say after 12 credits students are considered as full-time student uh you

00:41:10

Laura Barcellos: column.

Ajlan Okman: something like that. So, but the biggest problem is like the university expenses doesn't match with that \$22,000, right? So that has to be fixed first and then see if each row can take like less height. Uh all right. So and we're going to fix the wheel. We spoke about it. Enrollment deposit created to tuition. I have no clue what does that mean. So these need to be like you know worked out Laura take a stab at it proposed to Z review it with Z. So this doesn't make any sense you know enrollment deposit credit to tuition. So and then maybe over here.

00:43:45

Ajlan Okman: No it makes sense. I understand. One second. I'm in a meeting. Who is this? Hello.

Laura Barcellos: This is a bot.

Ajlan Okman: Yeah. probably is Edwards calling me.

Laura Barcellos: Welcome to a world. Yeah. Welcome to a world where a bot can call you.

Ajlan Okman: That's how we trying to make money as well. All right. So, this is not bad. It's pretty good. But I think let's again use the same uh type of taxonomy like for example I want to see anything that is I pay with cash or payment plan or credit card like how you guys create that like you know orange that's good and then

Dr. Zaibis Muñoz-Isme: people like it a lot. The one thing also too on the um for example the scholarships in the descriptions um being able to mention like this scholarship requirement is 3.0 GPA. It only lasts for eight semesters, stuff like that.

Ajlan Okman: Yes.

Dr. Zaibis Muñoz-Isme: So like we can work on some language for that.

00:44:51

Dr. Zaibis Muñoz-Isme: But everyone loves this right now. No institution is having a financial breakdown like this.

Ajlan Okman: Yeah. So that's why I think if we have a draw it's better. So this way they can see this at the same time and on the right side they can see

Laura Barcellos: That hurt.

Ajlan Okman: Laura. Where are you going? uh at the right side like you know we can also give them like flow full blown out view of what is that what they need as Zy said I think it will be tough to put everything in a popup. All right. Uh I think I we should choose a different color for the uh loans cuz blue is really close to uh purple.

Dr. Zaibis Muñoz-Isme: Yeah, I want you want it to be obvious that it's a loan,

Ajlan Okman: Yeah.

Dr. Zaibis Muñoz-Isme: not a scholarship.

Ajlan Okman: Maybe like grand scholarships that they don't have to pay. Maybe put it in green and then the purple or blue, whatever you guys want to put it.

00:45:46

Ajlan Okman: Uh we put uh for the loans, but we use like so many similar colors. I'm losing like what is what and whatever is accepted, whatever hasn't been accepted needs to be like scattered. Like you know how you have orange for dark orange for whatever I already paid and light orange for whatever I have to pay out of pocket.

Dr. Zaibis Muñoz-Isme: Anybody Prophet.

Ajlan Okman: Maybe do that like with scattered lines you know like light orange or orange white orange white orange white orange white something like that and do the same thing for the unaccepted eights. So, show me still with purple whatever eight that is. But if I haven't accepted, it needs to be like purple, white, purple, white, purple, white. And then uh in the example, show us how it's covered if it's a a that I haven't accept. So, I can like click on that and go accept. Does it make sense?

Laura Barcellos: Yeah. And we have a whole plat that we can use inside the the HTML.

Ajlan Okman: So it says here next step worth reviewing.

00:46:59

Ajlan Okman: Aster needs grant offer. Esther need grant offer. Uh blah blah more this term if accepted distributed. Yeah. So I have to see that over here. You see that grant offer? I don't see it right now. 3200 3,250. I don't see it in the how it's covered. I should see that in how it's covered and have purple white purple white purple white or blue white blue white blue white.

Dr. Zaibis Muñoz-Isme: We're also going to show like it hasn't been accepted, not accepted.

Ajlan Okman: Yes. So if they go accept it covers if they don't go and accept and it expires it turns into uh orange white orange white orange white. Does it make sense? All right. So there's a lot of UI UX task this way. Uh that's why like I think we should work in two work streams. So DhairyaSamarth, I don't know who's going to be in charge of this. Uh Samarth I think still learning the ropes on the UX.

00:48:03

Ajlan Okman: Dhairya, maybe you should write this since this is one of our like flagship features to get the UX buttoned up and then someone can closely watch you and learn from you and Laura I need you to be in charge of don't use AI or whatever like red line things work with zes of course like take a stab at use AI but I need like a hard documentation of what you're proposing to have a one-on-one meeting with running these two

Laura Barcellos: Oh,

Ajlan Okman: zies then we both agree you Zybe and I on the language and then we give it back to Daria Okay.

Laura Barcellos: okay. I I'm already working on a spreadsheet with all the feedbacks what we should do, how we should be written, all those stuff.

Ajlan Okman: Okay.

Laura Barcellos: Then we can we can improve this method. Okay.

Ajlan Okman: All right.

Laura Barcellos: Moving forward.

Ajlan Okman: So the other thing is before we move forward if they are showing the insight that it's important it should be always first in that story. Right. So you have like a next step worth reviewing.

00:49:02

Ajlan Okman: Again I'm not getting bugged down on the language. I think language can be improved over here but you can't have an insight at the bottom. always have an insight first so it draws their eye and they not paying attention to that. Does it make sense? But that purple thing should in my opinion move all the way up above the view. Mhm.

Laura Barcellos: Okay.

Ajlan Okman: Okay. and then they can like take agentic actions over there. And then I don't understand what's the difference between the UX or review offer thing like that versus payments. They're both taking us to different pages because of something else. You know, they're both kind of AI insights, but they should have like the same design system. You guys follow me?

Laura Barcellos: No, I'm I'm I lost here. What What is different?

Ajlan Okman: So first action over here that's so first action that we need to see over here is the AI insight is they need to uh accept their offer right so that's the most important thing because based on that they we will calculate how much they have to pay out of pocket so that's the first insight you should show them.

00:50:20

Ajlan Okman: Then the second insight that you want to really show them is

Laura Barcellos: No, sorry. Uh, this is post offer receptions.

Ajlan Okman: Huh?

Laura Barcellos: After this is after offer reception.

Ajlan Okman: The financial Yeah,

Laura Barcellos: They already accept

Ajlan Okman: but it looks like your inside below says that there is a finance rate offer that hasn't been accepted.

Laura Barcellos: Yeah,

Ajlan Okman: So I would have showed that first on the top and then after they accept it

Laura Barcellos: I guess

Ajlan Okman: I will show them okay like now you have to make this much out of pocket payment cuz second have your out of pocket payment plan in my opinion like that doesn't make sense I still have offers that I haven't accepted or rejected so I got to first do that then that needs to be generated but if you see I'm trading both of them as like AI insights. The top one looks different than the bottom one. So you guys need to have like an architecture of how you show that AI insight. All the next steps always in my opinion show one.

00:51:22

Ajlan Okman: Don't confuse them over here.

Laura Barcellos: Yeah,

Ajlan Okman: The first thing that they need to do is

Laura Barcellos: the same thing together. I got you.

Ajlan Okman: let's scroll down. uh book supplies. Yeah, I think I thought we agreed on something else over here. We're going to put like drop stands for money for living individually for the sequence. So savings on hand doesn't need a sequence, it's savings on hand, right? And then family allowance, you need to put the period over there that

says like such and such per week, such and such per day, right? So it needs to be like a drop down of how much my family is sending me. No, not that one. Right next to the 675. Yeah. So, you can skip the first one. And then the other thing is like you have to have another column called remaining amount from your loans. So after we cover the uh

Dr. Zaibis Muñoz-Isme: Where? Yeah, I agree. Also, where's the payment plan?

00:52:42

Dr. Zaibis Muñoz-Isme: Are we going to put payment plan sequence in here or no?

Ajlan Okman: that's no it's up there because you cannot have a payment plan for your personal expenses.

Dr. Zaibis Muñoz-Isme: No. Okay. Okay.

Ajlan Okman: It's not easy.

Dr. Zaibis Muñoz-Isme: Okay.

Ajlan Okman: You can only use payment plan for your tuition or like the school of attending expenses. So, uh we need to have remaining amount from your loan. Uh at this point it will be zero because there is no remaining actually have to make a payment plan. Savings on hand is editable. family allowance is we got to put the drop down period over there and then expected uh you can put the federal work study instead of calling it expected campus earnings and then you have to put another one called uh like I don't know job paycheck or something like And that one needs to have as well a unit. Is it like per day, per week, per month? And expected campus earnings, financial aid package, which we need to rename it to federal work study and that's going to be a per semester amount.

00:54:08

Ajlan Okman: Does it make sense? So then we normalize based on those units. money for living per semester number and then living expenses per semester number. Under the living expenses, books and supplies is per semester. So we don't have we cannot use that like one drop down that doesn't work for us. And then transportation it should be a drop down. They can choose per month versus per semester, right? And personal and phone needs to be per month. Personal expenses and utilities. I wouldn't call it phone. Okay. And then I will have like a subtext for all of these that explains what are they. Does it make sense? And additionally,

Laura Barcellos: I got

Ajlan Okman: just to recall, I know this example you guys are thinking that the person is going to stay on campus, but if they choose I'm staying off campus, a item needs to pop up over here for off-campus housing. Does it make sense? So, if they're on campus housing, it's a committed college expense that we show up.

00:55:37

Ajlan Okman: If it's a off-campus housing that they're going to pay out of pocket, we got to show it as monthly rent over here

Laura Barcellos: Yeah.

Ajlan Okman: and put zero if Yeah.

Laura Barcellos: Uh if they are staying with the parents or something that that was my

Ajlan Okman: Exactly.

Laura Barcellos: that was my question.

Ajlan Okman: Yeah.

Laura Barcellos: Okay.

Ajlan Okman: So on the left hand side again we will do the same edits. So we can see the sunburst chart. uh semester spending overspend. I will put over there your monthly not your per semester in the in the view. It should I think show you always your monthly expenditure. Yeah, something like that. Your average monthly spent is this much. But this I will do the other way around. So I will show them how much they will have on their pocket every month on average versus how much they are short every month on their

pocket on average. So basically I will like put that 254 over there and then explain that like you know you will have \$254 per month extra in your pocket or something like that cuz you're already showing that like 628 and 83 on the right side and I will suggest adding a secret like a the green line under the living expenses cuz if you have I'm thinking that outer ring is the money for living inner ring is the expenses is that correct or it's vice versa it's vice versa right inner ring is

00:57:50

Ajlan Okman: the money for living out other outer ring is expenses yes said so the both of

Dhairya Shah: Yes. Yes. Out is expensive.

Ajlan Okman: them can't add add to hunt the same amount. So, you should show either or. So, if I am underspent, if I have money in my pocket, I should have like something green that shows me how much I have left at the top. Does it make sense?

Dhairya Shah: Yep.

Laura Barcellos: somewhere.

Ajlan Okman: So I will add like at the out ring outer ring I will add another

Laura Barcellos: Sorry. Okay.

Ajlan Okman: slice in green color that show

Laura Barcellos: Meaning that I have more money than I need to live. Okay.

Ajlan Okman: exactly because cause the outer outer ring is the expenses. So I will put something green over there to show like how much money I have left more which will be the equivalent of \$2544. But if I'm un uh over spent, I will put a red in the inner ring, which is the money for living,

00:58:58

Laura Barcellos: Yeah, he's missing.

Ajlan Okman: right?

Laura Barcellos: Uhhuh.

Ajlan Okman: And I will say like missing 254.

Laura Barcellos: Gotcha.

Ajlan Okman: So this way like they both need to add to the same number. Either I'm over budget or under budget. I can see and that can be fixed.

Laura Barcellos: Gotcha.

Ajlan Okman: Does it make sense?

Laura Barcellos: Mhm.

Ajlan Okman: I like to uh try bigger changes in the simulator. So that should be I think we need to rephrase that not bigger changes. We should phrase it like we want to plan ahead for the next semester by the simulator. Right? So this this is already done this semester, right? They are committed already. They already get placed in their housing. Their financial aid is cut already, you know. Daria, are we clear? Does it make sense?

Dhairya Shah: Yeah,

Ajlan Okman: All right,

Dhairya Shah: I

Ajlan Okman: let's roll down. Okay, I don't think like off is the right language and that enrolled is like too small.

01:00:26

Ajlan Okman: So I think maybe enrolled not enrolled is a better language. We should do like Laura a UX exercise over here to understand what's the minimum size we can use versus we can't. Uh maybe it's cuz the screen share I think like that enrolled is like too crumbled over

Laura Barcellos: the size of this.

Ajlan Okman: there. But this don't take it as a hard comment like just research and come back you know or research and decide.

Laura Barcellos: Mhm.

Ajlan Okman: I would prefer something small than something too large because large doesn't look elegant. All right. What's next?

Laura Barcellos: next page.

Ajlan Okman: Do you guys still have juice left? Is this good or

Laura Barcellos: Oh, we still have a few minutes here.

Ajlan Okman: Yeah. Okay.

Laura Barcellos: We can moving.

Ajlan Okman: Like you know.

Sait Yucekaya: video was

Ajlan Okman: All right.

Laura Barcellos: Yeah.

Ajlan Okman: So the payments cannot be in charge of financial aid. Payments is you you got to change your point of contact for student accounts.

Laura Barcellos: Okay.

01:01:36

Laura Barcellos: So,

Ajlan Okman: Student accounts.

Laura Barcellos: payment is

Ajlan Okman: So they have either department called like student accounts or BSAR.

Laura Barcellos: Mhm. Okay.

Ajlan Okman: BSAR sounds like Rufar. There was like a Turkish TV show before say was born I think.

Sait Yucekaya: But I know it. Yeah,

Ajlan Okman: Yeah.

Sait Yucekaya: there's some ghosts in us.

Laura Barcellos: Of course. It sounds like uh handy bed in Portuguese.

Ajlan Okman: Something like that. Out of pocket payments university charges aids. So aids and payments posted that doesn't work for us. So university charges I like it. Uh put it like aids post uh financial aids accepted and posted. So let's separate the financial aids and then financial aids accepted posted. So you can put them all in one bucket. And then the third one you can put like a loan right accepted and posted. So either accepted or posted and then I think we need another bucket for payments and credits posted. So what if they have a credit or like enrollment deposit all of that should be a separate bucket and then the estimated remaining amount that can be positive or negative right so in this case I don't understand if it's uh like if it's positive I think we should put it in red right estimated estimated balance or something like that and if it's negative it should be in green and

01:03:25

Ajlan Okman: I don't know what you guys are showing the breakdown cuz breakdown is already over here for the payments for that right so it should be aic action if it's red and positive number it should say like set up a payment plan or make a payment right so you can give them two options on top of each other or something like that and then if it's positive uh schedule your direct deposit cuz they can also pull money out from their account which we covered under the financial overview.

Laura Barcellos: Okay.

Ajlan Okman: Okay. And then uh three ways to pay. Yeah, I don't think that exists. Either you can make a one-time payment right now or installment plan. I think it's only two ways to pay.

Laura Barcellos: Okay.

Ajlan Okman: And then ask Edward is not consistent. Uh, you got to put Edward always right side with the logo, right? Logo E.

Laura Barcellos: Mhm. Payment history so we know when was paid.

Ajlan Okman: Yeah. Okay. And then also come up with views for I don't think the three ways to pay is a good idea like in terms of the language.

01:05:11

Ajlan Okman: come up with a more inclusive language of all the stages. So if I have to pay, I see this, right? One-time payment or installment plan. If I need to get paid, if I'm over covered, I need to have something about receiving a direct deposit. Receive it by check, receive it by AC, right? I have two options. And if I order received my check, it should say something like, you know, you're covered and received your direct deposit. If I paid everything, it should say, you're all the covered for this semester. If I am in a payment plan, it should say you're all covered or like whatever the correct language is. uh total like upcoming payments this this that that so I should see like when it's going to hit and how much it is. Does it make sense?

Laura Barcellos: Yeah.

Ajlan Okman: All right. Payment history. I like it. Proposed payment schedule. Yeah. So merge this with that. You know,

Laura Barcellos: Good night.

01:06:26

Ajlan Okman: I I don't both at the same time. And then your financial calendar. I like that. But it's too confusing for them to digest. I think we should remove it. I think you Exactly.

Laura Barcellos: I think we are saying the same thing three times.

Ajlan Okman: So you should take that information parse it either into pay like you're already saying it with the payment schedule and payment plan already and then the other things for the financial aid you should put it to loans and aid page on when is that amount is going to get dispersed if they accept it. You know, like how you have accept deny buttons. In those buttons,

Laura Barcellos: Mhm.

Ajlan Okman: if they accept it already, it should say uh will be posted on your account in August 15th.

Laura Barcellos: Mhm.

Ajlan Okman: So, we know that money is going to hit their account at that time. And if they denied it, it will just say denied. Okay, let's go to next. Yeah, I will reorder that though.

01:07:36

Ajlan Okman: I will always first of all I will call that financial overview and then I will put the loans and aids next not payments. So financial overview and I will call it aid and loans not loans and aid aid and loans also in that picture show the aid first then the loans but then put the payment and then if they need to see like where are the expenses coming from the least uses going to be their expenses. Does it make sense? If I was using it, I would have put the expenses second. So, overview, expenses, paid and loans, and then payments. But for them, I think it would make more sense. Yeah, this schedule text proposed decision. I can barely read it. All right. So, the payments we spoke, what's next? Let's go to loan and aid. All right. So, this one is Iman Blackwood. Correct. Scholarships grants. Yeah, Laura like over here work more about the UX writing and then Edward is missing indeed.

01:09:05

Ajlan Okman: They should be able to ask questions or uh like view the breakdown. Click on the view breakdown, please. Yeah. Yeah. Not bad, but I think drawer I like drawers more. But if you want to keep it like this, fine. Uh, all right. So, next close. All right. Oh, no, no, no. Let's go up up up. So, over here like the language, uh, I will put like a little bit boiler plate on what are the scholarships and grants. I like how we have 12,000 something something and then SL16. So I can that's the offered. Uh see like if you can get them together, you know, uh side by side or maybe try something like morning brew like you know how we have like

Laura Barcellos: Mhm.

Ajlan Okman: that loading that says 60% accepted. You know you can of course say 60 but like maybe do like put 60%

Laura Barcellos: Yeah.

Ajlan Okman: accept two you can do that or like talk with money like pending award pending except this much you know it's a linear graph type of look will look nicer over

01:10:22

Laura Barcellos: Okay.

Ajlan Okman: here but then whatever they declined you can put in red whatever they accepted it can be in green whatever is pending can be in gray. See if like something like that will make it more entertaining. But definitely have like descriptions under each. So between scholarships and grants move like that gray text that you have term accepted, offered, no repayment is too technical. Give me like a quick blur. I'm just making this up. This of course has to be sounding more professional but say something like this is the money that you don't have to pay back you know something like that so I need to understand that basically what you put in gray over there sound more human likely okay explain what is title scholarships and grants feel free to put a icon there if you like it how we have it in morning brew then explain what the heck that means then

Laura Barcellos: Oops.

Ajlan Okman: number slash offered. Or you can put number and then like something in uh something like a line that you know we can track like a progress bar and let's do the same for all uh you see over there you have like pending decisions so that pending decision should be padded under those and then covered again we padded under that overall Uh if you want

01:12:12

Laura Barcellos: Excellent.

Ajlan Okman: to put like a overall coverage, you can maybe come up with like another card that shows upon acceptance of all of them. If they accepted, you know, how much they will have to their pocket versus how much will be the total covered amount. If you want to come up with a third card like that, feel free. which is pretty similar to the third card you have, but the user experience is a little bit weak on this. So,

Laura Barcellos: Okay.

Ajlan Okman: let's languages and then give it to Dhairya.

Laura Barcellos: Mhm.

Ajlan Okman: All right. Next,

Laura Barcellos: Sure.

Ajlan Okman: scholarships, grants. So, I should be able to directly accept from this page this story over here. It says offered, but I should be able to say like uh accept,

Laura Barcellos: Okay, I like it.

Ajlan Okman: deny. And then if it's scholarship, that's good. If it's loan, let's scroll down. Yeah, again, I should be able to accept from here or deny. But accept acceptance amount needs to be a rich text input.

01:13:27

Ajlan Okman: So if it's up to \$1,000, maybe I'm just needing \$500. With scholarship, it's not like that. It's binary. Yes. No. With loans. Yeah. So that loan example and such needs to be padded in the award. We are duplicating efforts over here. So those two tables, you got to merge it or you got to put things in the award details. If you guys think it's too much information, maybe like pick and choose direct subsidized loan. Yeah. First of all, we cannot use the award language over here. This is not awarded. This is loan. And for the direct subsidized loan at 6.39%, put that right next to it. Same thing. Put the interest rate over there. And then the repayment, me payment, origination fee, all of that. You you got to call it loan details. You cannot call it award details. And same thing like explain subsidize unsubsidizing in the details over here. It's creating too much clutter.

01:14:56

Ajlan Okman: And just for the example of it like put uh like research how many different type of loans there are. There are also p parent plus loans that your parent can pull under their name. If you can add them over here as well. I think there are four different type of loans that they can pull from federal government direct under their name subsidize unsubsidized and then parent subsidize unsubsidized. We check that out. But let's scroll down again. Edward needs to go up right work study terms accepted. So this amount that you see over here needs to match with the amount per semester in the financial plan disbursement schedule. I think you can put this like merge this with the table above cuz after I hit accept give me the date of when it's scheduled to be posted. I don't

Laura Barcellos: I think we canize better the informations we have in in this whole my financial stuff.

Ajlan Okman: All right. So I think most of the time like scheduled and posted dates are pretty much the same date.

01:16:14

Ajlan Okman: Scheduled posting date or whatever it's called or disbursement date whatever it's called. Place them over there after. Okay. So this is good. Let's go to next expenses.

Laura Barcellos: I guess I guess we're done for today. It's done. But we are here for a few hours right now. We can continue later or tomorrow.

Ajlan Okman: So, you know,

Laura Barcellos: I'm I'm losing the You can go.

Ajlan Okman: I'm going to go over the expenses.

Laura Barcellos: Go ahead. But uh I think at least myself I'm losing a bit the attention. That's all.

Ajlan Okman: Okay. So, yeah, let's do that later on then cuz over here like this, it's a longer conversation. Still tells me 28 waiting and such. But I think what we are doing with the financial literacy doesn't exist. So I'm really proud of what you guys are building and I'm more proud of how fast you built it, Daria, right before we showed uh Rosemary and like her eyeballs came out. Of course, another Edward comes.

01:17:20

Ajlan Okman: What did you ask now?

Laura Barcellos: Yeah. He He will show he can he can't hold himself. He can't

Dhairya Shah: It's pretty good.

Ajlan Okman: Yeah. So funny.

Dhairya Shah: It's It's pretty good though. I love it. It's like too smart.

Ajlan Okman: Okay then.

Laura Barcellos: Why Edward? We're in India. yellow. I flat in New

Ajlan Okman: Well, trust me like after you guys fix the UX and the functional on the other side,

Laura Barcellos: York.

Ajlan Okman: I will have like full Adwords functional sessions with you that we will go over like Adwords user experience.

Dhairya Shah: Yeah.

Laura Barcellos: We going to get there, Dia. Like Edward is super smart and I love what we are doing, but we really need to deliver the the sprint stuff. We are going to have a lot of time to work with Wedward and also a lot of insights from our customers and their database. So like the intelligence part will be beautiful.

Ajlan Okman: Let's focus on this morning priority.

01:18:28

Laura Barcellos: So I I made I made DSM uh bigger tomorrow. I will give the feedbacks. Well, everybody here we all listen to the feedbacks. I will write down as I did with Samar. I will create the spreadsheet. I will give it to you guys what we need to change and where. And uh by tomorrow DSM I would like to keep going on those because we have the rest of my financials and my enrollment and appointments to show. Uh we have a

Ajlan Okman: Let's do incremental. So why don't we finish not wait until tomorrow DSM. Let's take like an hour or so cuz morning brew was just spot on. That was like 10 to 15.

Laura Barcellos: Yeah, it's just a small stuff too.

Ajlan Okman: Yeah. So like in next hour or so give us the morning brew edits. I want D to start morning groove already.

Laura Barcellos: Okay,

Ajlan Okman: Okay.

Laura Barcellos: so uh the second thing I will ask is I need an stage environment and there will be only what agelon approved.

01:19:30

Ajlan Okman: Yeah.

Laura Barcellos: So please uh say if you can set this environment because when I was going to approve morning brew for the stage environment then we push there and we forget about it for now.

Ajlan Okman: Yeah. So, how do we do that Sait?Because if I approve UI and you guys make it work right,

Laura Barcellos: Mhm.

Sait Yucekaya: Yeah.

Ajlan Okman: it should go to from like dev to demo if just the UI works and then if functionality works from demo bring it to stage, right? If we approve it and then at stage now the predictions and everything the data model is good it should go to prod. Would that be too much?

Laura Barcellos: uh as what we are what we are showing you today uh

Ajlan Okman: is dead.

Laura Barcellos: except by higher education use it's working so my so my

Ajlan Okman: Okay.

Laura Barcellos: thing what I I'm agreeing with the gaps if we have epics there are in design we are sit here and talk about the looks and I don't care how it works. On the f on the Thursday's uh reviews, we are talking about functionality and functionality means uh front and back.

01:20:42

Laura Barcellos: So that's it. We are here to present functionalities.

Ajlan Okman: what I'm talking about like I think you guys work in dev environment or test whatever you want to call this that's fine like what merges there whatever you want to call it dev or test doesn't

Sait Yucekaya: Yeah.

Ajlan Okman: matter then I need something that I approve the front end of it that looks alike works alike or zy so that's the demo environment.

Laura Barcellos: Mhm.

Ajlan Okman: So then like let me let me finish this test demo is or like dev and demo is sync. So then you keep developing on like the demos branch right whatever but zy doesn't get interrupted and then when the functionality is there upgrade the demo as well if you want but definitely push it to stage because at the demo unfortunately some stuff we can't generate automatically so for example like your delta

Sait Yucekaya: Yeah.

Ajlan Okman: insights we can't probably put real time data every day that is changing and such right later We can later on we can get rid of that and say okay we have like a

state institution that we have like agents acting like a financial aid person receive emails and such but right now in the beginning we won't have that so I need something that looks alike works alike or just the dog and pony showing demo normally if not have this issue I wouldn't say like have

01:22:10

Laura Barcellos: Mhm.

Ajlan Okman: a demo directly have you uh dev stage and prod but I need something for zy that looks alike works alike so however you guys want to do the pushes pulls uh branch merges deployments on you you figure out but I cannot have like diab

Laura Barcellos: No, of course, as I it needs to have an environment that will not break in her uh and

Ajlan Okman: Yeah.

Laura Barcellos: speed whether with a full functionality or a full mocked functionality.

Ajlan Okman: Yeah.

Laura Barcellos: I I like it doesn't matter what my

Ajlan Okman: So imagine it like this. Dev is your environment like with developers and Laura, right? You guys work and make sure everything is good to go. Demo is what Zab uses her environment. Stage is what I approved my environment. Prod is client's environment. Right? If there's a better way to solve it, please. Right.

Laura Barcellos: No, I don't think so.

Ajlan Okman: Right. Yeah.

Laura Barcellos: Like uh having the stage environment reflecting only what is completely done.

01:23:16

Laura Barcellos: That's that's the rule because then we have control.

Sait Yucekaya: Yeah.

Laura Barcellos: Then we

Sait Yucekaya: Yeah. This is business as usual. So we I mean as we can have as much environment as we want like no no problem. But I get like uh we can have a like UI working part only for zus because like I mean anything can happen on back end. So we don't want her to be blocked.

Ajlan Okman: Yes.

Sait Yucekaya: So a de stage pro as usual and like um demo can like same with stage but only like test model and that's it.

Ajlan Okman: Mhm. Yeah.

Sait Yucekaya: Uh yeah

Ajlan Okman: So like and then demo will also have features like uh for example a quick like a button that says upload test transcript.

Laura Barcellos: Yeah.

Ajlan Okman: So you guys will have like a test transcript.

Laura Barcellos: some phenomen.

Ajlan Okman: So this way like she doesn't have to have like a folder full of like BS documents that she has to upload. You know what I mean? So that's the reason why we have demo.

01:24:09

Ajlan Okman: Like of course can we figure out how to upload a transcript? We can you see the drag and drop but I need like demo specific buttons

Sait Yucekaya: Yeah. Yeah. I see like

Ajlan Okman: and feel free to like pick a interesting color for those or interesting way that is just for like demo purposes. Maybe like it has like a dash dash outline that we show for demo doesn't exist.

Sait Yucekaya: Oh, couldn't get the last part. What is dash?

Laura Barcellos: I got it. I got it.

Sait Yucekaya: Can you translate? Uhhuh.

Ajlan Okman: for

Sait Yucekaya: Another Okay.

Ajlan Okman: the UI space just for demol purposes.

Laura Barcellos: Yeah.

Sait Yucekaya: Okay,

Ajlan Okman: All right.

Sait Yucekaya: I see.

Ajlan Okman: I It's sometimes good to press now for Turkish.

Sait Yucekaya: I got it.

Laura Barcellos: No. Yeah. Sometimes there are few things that we understand in our own language that we don't in in our second or

Ajlan Okman: Yes.

Laura Barcellos: third.

Ajlan Okman: Yeah.

Samarth Babbar: I understand all of them.

01:25:17

Ajlan Okman: Unfortunately,

Laura Barcellos: Sometimes that's that's all we have.

Ajlan Okman: my Spanish and Portuguese is not really family friendly. I hope I never get to use my Spanish and Portuguese in our calls.

Laura Barcellos: Yeah.

Ajlan Okman: We keep it HR compliant.

Laura Barcellos: Oh,

Sait Yucekaya: Hey.

Ajlan Okman: This is what happens when you Yeah.

Laura Barcellos: no.

Ajlan Okman: Yeah.

Laura Barcellos: Yeah.

Ajlan Okman: This is what what happens when you go to like a boarding school with bunch of people from all over the

Laura Barcellos: Yeah.

Ajlan Okman: country.

Laura Barcellos: Oh, let let me have put me and Marcus in a meeting so you can see it like how it went.

Ajlan Okman: Uhhuh.

Laura Barcellos: I was I was I was teaching to say the glory of the Portuguese language.

Sait Yucekaya: Yeah,

Laura Barcellos: I I I teach.

Sait Yucekaya: some personal personal development hours,

Laura Barcellos: Yeah, I Yeah,

Sait Yucekaya: happy hours, let's say teaching me some inappropriate things.

Laura Barcellos: I I I was No, it was very proper. It's not because it's a bad word that is in improper guys. Uh that's it for now. I I will uh wrap up everything. I will give you what we need to change that on Morning Brew and let's try to come by EOD uh with something uh on morning brew so we can ship this this week and of course DSM tomorrow I make it very very big. I know we are going uh entering and leaving but we still need uh to figure it out a few stuff there. Okay,

Ajlan Okman: Thank you all.

Laura Barcellos: see you. Bye-bye.

Sait Yucekaya: Fire
